#### **BRIEF DESCRIPTION**

The East Hickman Pump Station Phase 2 project (EHPS2) is an identified Remedial Measures Program (RMP) project within LFUCG's Consent Degree (CD) program mandated by EPA. The Phase two project builds on the in operation Phase 1 pump station and 6 MG wet weather storage tank facility. The EHPS2 project includes upgrades/replacement of the facilities pumps and controls to meet full development of LFUCG's Capacity Assurance Program (CAP) Consultant's projections, installation of a new odor control system providing odor control protection for the new EH 36-inch force main, installation of two new communicators within the pump station building to assist shredding material within the sanitary flow into smaller particles protecting the pumps from damage and clogging, modifications to the existing controls and SCADA system allowing for historical flow data capture, etc. Expansion and rehabilitation of the East Hickman pump station increasing the pumping capacity from 12,000 gallons per minute (GPM) to 20,000 GPM to better accommodate wet weather flows and planned redirection of flow within the sanitary sewer system. This upgrade should eliminate an average of 11 sanitary sewer overflows (SSO's) per year.

#### **BRIEF DESCRIPTION**

This project will extend water to unserved areas of the County. The areas in this project are KY 333 from US Hwy 60 to Bewleyville, a loop of KY 2202 and KY 2781 south of Irvington, Guston-Bewleyville Road, Mark's Ridge Road, Dent's Bridge Road, and Sienna Circle. There are approximately 150 households in these areas that currently rely on either hauled water or groundwater wells. In addition, the City will use contingency funds in the project to extend water further south on KY 333 and east along MH Dowell Road. The City will also construct a water hauling station in Union Star near the Meade County line.

GRANTEE

FARMDALE SANITATION DISTRICT FRANKLIN COUNTY

#### **BRIEF DESCRIPTION**

The Farmdale Sanitation District has acquired ownership of seven (7) previously private wastewater systems that had a long history of poor performance, compliance issues and violations. In an effort to provide customers with safe and reliable sanitary sewer service, Farmdale proposes to design and construct an interceptor sewer system that is intended to eliminate six (6) of the outdated and potentially failing package WWTPs and collect the wastewater flow from those subdivisions down to a single large pump station which will then convey the sewer flow to the City of Frankfort's wastewater system for treatment. The package WWTP's to be eliminated serve the Coolbrook, Edgewood, Farmdale, Farmgate, Meadowbrook and Edgewood Subdivisions. In total, this project will benefit approximately 834 customers. The project includes approximately 13,800 LF of gravity sewer, 38,000 LF of force main, four pump stations, and a 2,000,000 million gallon wet weather detention basin, as well as the decommissioning of six (6) package WWTPs. There will be no rehab/replacement of any existing sewers. The only item that will be rehabbed is the Highwood Pump Station.

TODD COUNTY WATER DISTRICT LOGAN COUNTY

#### **BRIEF DESCRIPTION**

The Todd County Water District (TCWD) is comprised, in total, of just over 454 miles of water line and five water storage tanks, totaling 1.300,000 gallons, serving approximately 3.524 customers. These numbers include approximately 35 maintained miles and 600 customers. in Logan County. As of the Spring of 2003, the Todd County Water District began to purchase all of their treated water from the completed water system of the Logan Todd Regional Water Commission (LTRWC), The 2020 average daily LTRWC usage within the Todd County system was approximately 565,000 gallons per day. Todd County has four meter stations with the Commission, one located near Guthrie for Novelis, one near the Trenton community, one at their Allender's Hill water tank, and one at the base of LTRWC's Todd County tank. The Todd County Water District is a relatively large water system covering most of Todd County plus the northwest corner of Logan County including the Lake Malone area. The majority of roads within the TCWD boundary have water service. Presently, the District's biggest problems or needs are in three parts: 1) cutting water losses in the distribution system as well as assisting customers with identifying their own problems and high usages; 2) filling out the distribution system with short, small-diameter waterline extensions to fulfill a lengthy list of service requests; and 3) installing additional master meter vaults in various points of the county to remotely measure flows and pressures for early leak/problem detection via SCADA. This proposed project offers a solution for enhancing the District's ability to quickly identify and locate abnormal leaks or line breaks in the Logan County portion of their service area. The project will include the installation of multiple master meters to assist with early leak detection and daily tracking & trending. With this upgrade, master meters can be monitored on a daily basis to quickly alert their maintenance staff of an issue. Additionally, the Project will include cutting in approximately 16 gate valves of various sizes to further assist with minimizing disruptions in a line break. The total cost of the proposed project is estimated to be \$185,000.

GRANTEE MUNFORDVILLE, CITY OF HART COUNTY

#### **BRIEF DESCRIPTION**

The Munfordville water system has a large water loss percentage. Therefore, the City has decided that to reduce the water loss percentage, all existing residential and commercial water meters shall be replaced (approximately 650 meters). Munfordville has decided to replace these meters with new radio read type water meters. The new meters will be a type of water meter with a radio read register for installation in a pit type. The transmitter operates using a broadcast radio frequency technology that does not require an FCC license. In addition to the meter installation, a computer along with the software necessary for receiving the meter transmitter information will also be required as part of the upgrade to the radio read type meters.

GRANTEE MAGOFFIN COUNTY WATER DISTRICT
MAGOFFIN COUNTY

#### **BRIEF DESCRIPTION**

This is a waterline extension project to serve unserved areas in Magoffin County. The project will install approximately 22215 LF of 3" and 21014 LF of 4" waterline and its appurtenances to provide water service to approximately 55 households along KY 542, KY 1502, and Jake Fork. A pneumatic pump station along KY 1502 will be installed to maintain adequate pressure for customers. This project will also include approximately 6,000 LF of 3" PVC waterline and appurtenance to serve 10 households along KY-378.

GRANTEE PAINTSVILLE UTILITIES COMMISSION
JOHNSON COUNTY

#### **BRIEF DESCRIPTION**

The project will provide public water service to approximately 40 new customers. The new customers will be served through 2-inch and 3-inch waterlines. The areas of Johnson County to be served include Stapleton Lane at Elna, Dixon Branch at Flat Gap, Jackson Fork Road at Riceville, and Kimbler Lane at US 23. The project will also provide service for the new Johnson Central High School campus which will be served by a combination of 6", 12", and 14" lines. The project will install approximately 10200 linear feet of waterline.

GRANTEE	SOUTH SHORE, CITY OF
	GREENUP COUNTY

#### **BRIEF DESCRIPTION**

To provide adequate service to current business and residents as well as allow for economic growth, the waterlines along Main Stree in South Shore will require replacement with more adequate and less problematic lines. To achieve this, the city hopes to replace the original steel lines with HDPE lines to ensure a long life to these lines in a critical area of the system. 1700 feet of steel line will be replaced with multiple gate valves and blow-offs as needed. The existing line will have to be cut and capped, customers reconnected to the new line, and the pavement restored.

GRANTEE LANCASTER, CITY OF GARRARD COUNTY

#### **BRIEF DESCRIPTION**

The project is to install a new raw water intake screen to replace the existing. The existing raw water screen becomes blinded and not operational during significant rain events. The raw water cannot adequately get into the raw water wet well and starves the pumps for water. The City has come very close to running out of water to serve its customers. The new screen will have larger openings and allow more water into the wet well. The project will also include installing level monitoring for the raw water wet well which will provide the operators with immediate feedback as to the level of water and advanced notice of issues should they occur. The wet well is approximately 16 miles from the water plant in a remote area so monitoring of the wet well level via SCADA is crucial. The project will also include installing a submersible pump at the City's old water plant that will serve as a backup for pumping raw water from the City Lake to the water plant in the event of an emergency. The lagoon of the water plant will reach capacity in the next year or two and will need cleaning out. Installing an access road to the lagoon will be required once the plant reaches the time to clean the lagoon. A leak in the raw water transmission main has been discovered near a section of high pressure gas main. It is crucial that the City replace/relocate approximately 1,100 feet of raw water transmission main with 18" PVC pipe to address this emergency situation.
