Forecast overview

Stronger growth, lower unemployment, higher tariffs, and the OBBBA

- S&P Global Market Intelligence forecasts 1.7% GDP growth in 2025, followed by 2.4% growth in 2026 and 1.7% growth in 2027.¹ Growth in 2025 and 2026 is revised up from last month by 0.3 and 0.4 percentage point, respectively.²
- With near-term GDP growth stronger in this month's forecast, the unemployment rate peaks at a lower level than last month. Following a reading of 4.2% in July, the unemployment rate rises to 4.5% by mid-2026, where it remains for about two years. In last month's forecast, the unemployment rate peaked 0.1 percentage point higher at 4.6%.
- The average effective tariff rate is higher in this month's forecast than in the July baseline. Last month, in addition to various sector-specific (Section 232) tariffs, we assumed that a 10% universal baseline tariff would apply to all countries outside of North America and mainland China. Since we published last month's forecast, various trade deals were reached that included tariff rates of 15% or higher, and the universal baseline tariff was raised for many countries from 10% to 15%. With all of these new rates now in effect, the statutory average effective tariff rate on nonpetroleum imports is 21%, four percentage points higher than the 17% rate assumed in last month's forecast.
- With marginally tighter labor markets and a higher average effective tariff rate, core PCE³ inflation rises from 2.7% in the second quarter to a peak of 3.8% in the fourth quarter of 2025 (measured on a four-quarter percent change basis), 0.2 percentage point higher than the peak in last month's forecast.
- With core inflation reaching a (higher) peak late this year, we continue to expect the Federal Reserve to maintain the funds rate target range at the current range, 4.25% - 4.50%, until December of this year.

The One Big Beautiful Bill Act

In this month's forecast, we replaced our placeholder assumption for fiscal policy with provisions in the One Big Beautiful Bill Act (OBBBA). There are similarities and some important differences between our placeholder assumption and the OBBBA. First, the OBBBA extended indefinitely the cuts to marginal personal tax rates enacted in the 2017 Tax Cuts and Jobs Act. This was included in our placeholder assumption. However, the additional personal tax relief in the OBBBA (e.g., relief on tip income and overtime pay) was smaller than we had assumed. As a result, beginning in 2026, personal tax payments are higher and disposable personal income is lower than in our July baseline forecast.

Expensing provisions have modest impact

The OBBBA includes expensing provisions for business capital that were not included in our placeholder assumption. But these provisions, in our estimation, will have only a modest impact on investment spending. With full expensing, businesses can write off the full cost of new investment in the current tax year, reducing their taxable income. But this also means businesses will lose tax deductions in future years that were scheduled under prior law. What matters for business behavior is the present value of current and future tax deductions, which is boosted by a switch to full expensing, but not by much.

Average corporate tax rate is higher

The OBBBA did not include reductions in the marginal and average tax rates on corporate income, as we assumed in our placeholder assumption. Rather, it left the marginal tax rate unchanged and introduced several new provisions that, in our estimation, will marginally raise the average corporate tax rate. This, in turn, reduces after-tax profits and dividends, which weigh on projected equity values.

Fiscal restraint is different than expected

OBBBA includes fiscal restraint that is considerably different from the fiscal restraint included in our placeholder assumption. We had assumed federal direct spending would be reduced relative to baseline. Instead, federal direct spending was increased, and fiscal restraint came in the form of reduced outlays for Medicaid, Affordable Care Act insurance premium tax credits, Supplemental Nutrition Assistance Program benefits, and student loan forgiveness. The largest of these provisions are those surrounding Medicaid. In our forecast, we assume that states assume a larger role in the provision of Medicaid benefits, mitigating the impact of reduced federal outlays. Increased federal spending is a boost to GDP growth in the early portion of the forecast, while reduced outlays for Medicaid and other programs are a new source of drag.

^{1.} This forecast was issued on August 6, 2025. Unless otherwise noted, all quarterly growth rates are stated as compound annual rates, all expenditure components of GDP are in chained 2017 dollars, and all annual growth rates are full-year over full-year percent changes.

^{2.} Our $\underline{\text{Forecast Flash}}$ expands on the source of upward revisions to the forecast.

^{3.} PCE is the acronym for personal consumption expenditures.

Consumer spending soft in Q2 as tariffs emerge in June prices; payrolls revised lower

Consumer markets: Spending rose 0.1% in June, following a 0.2% decline in May, as growth remained stuck in low gear. Real PCE rose a modest 1.4% in the second quarter, up from 0.5% in the first. Growth in the first two quarters of 2025, however, averaged a lackluster 1.0%, down from 3.1% in 2024. PCE prices excluding food and energy (core) firmed 0.3% in June, leaving the 12-month change at 2.8%, little changed from January. Core inflation slowed to 2.5% in the second guarter, after surging 3.5% in the first. In our forecast, core inflation jumps to 5.1% in the third quarter (quarterly basis) and to 3.8% this year on a four-quarter basis, as the impact of higher tariffs cannot be delayed indefinitely. The leading edge of those price hikes was visible in June, as evidenced by the 0.4% rise in goods inflation. Personal income rebounded 0.3% in June, after falling 0.4% in May. June's 0.1% monthly rise in wages and salaries was the slowest in a year and was well below recent averages. Income growth slowed from 6.7% in the first guarter to 5.3% in the second. The rise in the second quarter was helped by gains in wages and salaries, up 4.9%, and personal transfer receipts, up 12.6%. Income growth continued to outpace inflation, offering modest support to spending. Growth of real disposable personal income (DPI) rose to 3.0% in the second quarter, up from 2.5% in the first, and has now grown for twelve consecutive quarters. Taken together, slowing income gains and rising prices have demand in the third quarter looking soft, while volatile trade policy and consumer fears remain risks to growth this year.

Labor markets: The labor market remains in a delicate balance with some cracks starting to emerge. Nonfarm payroll employment rose by 73,000 jobs and the unemployment rate ticked up to 4.2% in July. The increase in payrolls was below expectations, and gains in the prior two months were revised lower by a combined 258,000 jobs. Payroll gains over the three months ending in July averaged just 35,000 jobs, well below the average of 150,000 over the prior 12 months (ending in April 2025). Employment in the household survey fell by 260,000; the labor force dipped by 38,000 people, outpaced by a 221,000 rise in the number of unemployed. The participation rate ticked down to 62.2% in July and has fallen 0.5 percentage point over the last 12 months, with most of that decline happening over the last four months. The wheels could still fall off later this year, but for now, employment continues to chug along in a low gear. We expect the labor market will continue to soften over the nearterm, with payroll gains slowing to an average of 57,000 over the balance of the year and the unemployment rate rising to a peak of 4.5% by mid-2026.

Business investment: Growth of business fixed investment (BFI) slowed from 6.0% in 2023 to 3.6% in 2024 and is forecast to slow further to 2.5% in 2025 and 0.2% in 2026. After that, growth of BFI firms. Growth of BFI is stronger over the next few years than in last month's forecast. This is partly due to new expensing provisions in the One Big Beautiful Bill Act. More importantly, though, it reflects the markup to GDP growth, which feeds back as increased demand for business capacity. Focusing on the near term, we continue to expect declines in equipment spending over the second half of this year, as the jump in imports of capital goods early in 2025 unwinds.

Housing and construction: The number of new singlefamily homes for sale has surged to half a million, its highest level since 2007. Builders have responded by cutting prices and offering non-price incentives to keep completed home inventory from rising further. Meanwhile, tariffs and labor shortages resulting from deportations are raising costs. As a result, homebuilders will scale back housing starts. Housing starts are expected to slow from 1.37 million in 2024 to 1.34 million in 2025 and further to 1.32 million in 2026. Home sales will also struggle due to the locked-in effect: homeowners with low-interest-rate mortgages feel stuck, as buying a new home would mean borrowing at today's high rates. We expect existing home sales to slide from 4.07 million sales in 2024, the lowest tally in 29 years, to 4.00 million in 2025 and bounce back to 4.39 million in 2026 as homes become more affordable due to lower mortgage rates and lower real home prices.

International trade: The US trade deficit as a percent of GDP decreased from 4.2% in the first guarter to 2.9% in the second. Imports surged at a 37.9% rate in the first quarter but subsequently dropped 30.3% in the second. Tariff revenues are accumulating. Revenues from customs duties generated \$26.6 billion in June, up from \$6.3 billion in June 2024, according to the Monthly Treasury Statement. The effective tariff rate on goods climbed to 9.1%, up from 2.2% in June 2024. Generally, tariffs tend to strengthen the dollar, while uncertainty tends to weaken it. This year, uncertainty has played a stronger role: the dollar is down 6.1% from December 31. In the forecast, the broad dollar index is expected to fall from its second-quarter level of 122.7 to 119.7 by late 2025 and stabilize around that level thereafter. We expected net exports to contribute 0.1 percentage point to third-quarter GDP growth after deducting 5.0 percentage points in the second. Net exports deduct 0.2 percentage point from growth this year, but add 0.8 percentage point in 2026.

Key forecast assumptions

OBBBA and higher tariffs in the August forecast while the Fed remains on hold until Dec. 2025

Federal fiscal policy: This month we folded the One Big Beautiful Bill Act (OBBBA) into our forecast. The OBBBA extends indefinitely the cuts to marginal personal tax rates enacted in the 2017 Tax Cuts and Jobs Act and includes new deductions for tip income and overtime pay, among other personal tax provisions. The OBBBA includes new expensing provisions for business capital and new and expanded deductions for corporations, but rescinds most of the clean-energy tax credits previously introduced in the Inflation Reduction Act. The OBBBA includes increased federal direct spending, but reduces outlays for Medicaid, ACA insurance premium tax credits, and SNAP benefits. We assume federal employment falls by 255,000 through October 2025.

State & local fiscal policy: Unspent pandemic-era funds as well as monies authorized under the Infrastructure Investment & Jobs Act (IIJA) mitigate pressures to reduce state and local spending. States take on a larger share of provisions for Medicaid benefits, as federal grants are reduced, but still trim Medicaid rolls over 2027 and 2028.

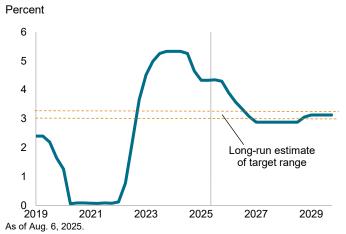

Population: Our net international migration assumptions are 500,000 lower per year, relative to Census projections, for the next four years.

Monetary policy: We assume the Fed holds the funds rate at the current level until December 2025. The Fed then cuts by 25 basis points at three consecutive meetings through March 2026 before slowing to a pace of every other meeting over the rest of 2026, bringing the federal funds rate target to a range of 2.75%-3.00%, 25 basis points below our estimate of the long-run "neutral" range. The Fed raises the funds rate back to neutral in late 2028.

Tariffs and trade: In addition to the Section 232 tariffs already in place, our August forecast includes new Section 232 tariffs on lumber, semiconductors, pharmaceuticals, and critical minerals, ranging from 10% to 25%, effective in fourth quarter 2025. We include International Emergency Economic Powers Act tariffs tied to fentanyl flows and immigration on imports from China (20%), Canada (35%) and Mexico (25%). The latter two step down to 12% by mid-2026. For "reciprocal" tariffs, this forecast assumes rates that were announced on Aug. 1, which range from 10% to 50%.

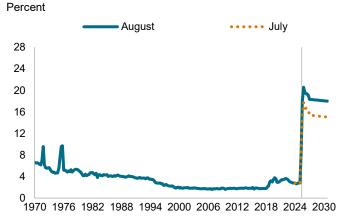

Global outlook: Growth of real trade-weighted foreign GDP edges down from 2.1% in 2024 to 1.8% in 2025 before rising to 2.3% on average over 2026-2029. Foreign CPI inflation receded to 3.2% in 2024 and eases further to 2.3% in 2025 where it remains in 2026. Foreign sovereign bond yields average 2.8% from 2025-2029.

Alternative scenarios

Two alternative outcomes for the US economy

Our assessment of the economic risks around the baseline forecast has changed from last month. Relative to our base forecast, we now view risks as being slightly tilted to the downside. Downside risks stem from tariff-induced inflationary pressures, more restrictions on immigration resulting in more deportations, and a deterioration of financial conditions relative to the baseline. Posing upside risks are favorable financial conditions due to more lenient trade policy along with less restrictions on immigration resulting in less deportations than in the baseline. As a result, we assign a 50% probability to our base forecast, 30% to the Pessimistic, and 20% to the Optimistic scenario.

Pessimistic Scenario: Strict trade/immigration policy and mild near-term financial stress lead to economic weakness (30% probability)

The pessimistic scenario is characterized by higher tariffs across the board and more pronounced countermeasures by trading partners. Underlying this narrative is the assumption that higher tariffs cause higher inflation, while financial conditions deteriorate further, hampering economic activity and leading to a decline in consumer and business confidence. Furthermore, the scenario assumes that deportations happen faster and on a larger scale relative to the baseline. As a result, GDP is essentially flat in the third quarter of this year and declines in the fourth, with a cumulative, non-annualized decline of 0.1% over the second half.

GDP growth remains consistently below baseline through mid-2028 as a result of the tariff-induced inflationary pressures, slower population growth, and a negative response in financial markets to the trade and immigration policy assumptions included in this scenario. On an annual basis, GDP growth averages an unimpressive 1.1% over 2025-2027, versus trend-like growth of 1.9% in the base.

Declining consumer demand and deteriorating financial conditions lead businesses to scale back investment plans. Business fixed investment declines at an average rate of 0.4% over 2025-2027, versus average growth of 1.3% in the base case.

The unemployment rate in this scenario rises from 4.2% in the second quarter of 2025 to 6.3% by late 2027, before easing to 6.0% by the end of the forecast horizon, 1.7 percentage points above the baseline.

PCE inflation is initially higher than the base due to higher tariffs, but subsequently falls below baseline in early 2027 following the weakness in the economy, and remains well below target through 2029 as a result of the additional slack in labor markets. The Fed begins an aggressive series of rate cuts in fall 2025 due to the economic weakness and takes the funds rate down to a range of 1.75%-2.00% by late 2026. It begins normalization back towards baseline in mid-2029 once the unemployment rate and inflation are on a sustainable track towards baseline.

Optimistic Scenario: Lenient trade/immigration policy and improved financial conditions boost growth (20% probability)

The optimistic scenario is characterized by lower tariffs across the board and less pronounced countermeasures by trading partners than in the base. Underlying this narrative is the assumption that lower tariffs lead to faster moderation in inflation and lower the neutral fed funds rate by 25 basis points. Lower interest rates, along with improved financial conditions, are an additional source of strength in the economy. Furthermore, the scenario assumes that deportations happen slower and on a lesser scale than in the base. Looser trade policy implies less downward pressure on imports of goods and pushes net exports lower than in the baseline. The more lenient immigration policy is less of a drag on population growth, and, by extension, economic output.

GDP growth remains consistently above baseline through 2028 as a result of the joint effect of favorable financial conditions due to the lower tariffs and faster population growth. On an average annual basis, GDP growth averages an above trend 2.4% over 2025-2027, versus trend-like growth of 1.9% in the base case.

Modestly stronger consumer demand and improved financial conditions lead businesses to expand investment plans. Business fixed investment rises over 2025-2027 at an average annual growth rate of 2.1%, versus an unimpressive average increase of 1.3% in the base.

The unemployment rate in this scenario edges up to 4.3% by late 2025, 0.2 percentage point below the peak in the baseline, where it remains through 2029.

PCE inflation is lower than the baseline early on due to the lower tariffs, but subsequently moves above baseline in mid-2026 and remains above baseline through 2029 as a result of the economic strength and the tightness in labor markets. The Fed continues the current easing cycle at a faster pace than in the baseline, cutting three times in 2025 and four more in 2026 until the funds rate reaches a range of 2.50-2.75% in late 2026, 25 basis points below the baseline range.

US Macro Forecast Snapshot

US Macro Forecast	Baseline (50%)	Possimistic (30%)	Optimistic (20%)
	Baseline (50%)	Pessimistic (30%)	Optimistic (20%)
GDP growth	Real GDP rose 2.8% in 2024. Growth continues at 1.7% in 2025 and 2.4% in 2026.	Real GDP growth comes in at 1.4% in 2025 and slows to 0.9% in 2026.	Real GDP growth falls to 1.9% in 2025 and rises to 3.3% in 2026.
Consumer spending	Consumption rose from 2.5% in 2023 to 2.8% in 2024. Growth continues at 1.9% in 2025 and 1.7% in 2026.	Spending growth drops to 1.7% in 2025 and decelerates to 0.2% in 2026.	Spending comes in at 2.2% in 2025 and rises to 2.9% in 2026.
Business fixed investment	Rose 3.6% in 2024 and rises 2.5% in 2025, then falls 0.2 in 2026.	Rises 2.1% in 2025 before contracting 2.7% in 2026.	Rises 2.7% in 2025 and 1.5% in 2026.
Housing	Housing starts fell from 1.42 million in 2023 to 1.37 million in 2024 then nudge up to 1.34 million in 2025 before declining to 1.32 million in 2026.	Housing starts will drop to 1.33 million in 2025 and 1.19 million in 2026.	Housing starts will increase to 1.35 million in 2025 and pick up to 1.37 million in 2026.
Exports	Rose 3.3% in 2024; rise 0.9% in 2025 and 3.1% in 2026.	Rise 0.7% in 2025 and 1.5% in 2026.	Will rise 1.0% in 2025 and 3.6% in 2026.
Fiscal policy	Personal tax cuts under 2017 TCJA made permanent. Additional personal and corporate tax cuts enacted.	Average effective tariff rate is 22%, roughly 4% higher than in the baseline	Average effective tariff rate is 13%, roughly 5% lower than in the baseline
Monetary policy	We expect the federal funds rate target to remain unchanged until December 2025 when the Fed resumes the easing cycle. Five cuts over 2026 bring the range to 2.75%- 3.00% by yearend	The federal funds rate target is lowered sooner and more rapidly than in the baseline, reaching a range of 1.75%-2.00% by late 2026, then picks up in late 2029 to 3.00%-3.25 in 2030	The federal funds rate target range is cut more rapidly than in the base, settling at a range of 2.50%-2.75% by late-2026 before rising to 2.75%-3.00% in early 2029
Credit conditions	Loosened slightly in 2024; conditions similar amidst steady interest rates in 2025.	Remain slightly tighter than in baseline.	Remain slightly looser than in baseline.
Productivity growth	Rose 2.7% in 2024, and will rise 0.8% in 2025 and 2.2% in 2026.	Rises 0.6% in 2025 and 1.9% in 2026.	Rises 1.0% in 2025 and 2.7% in 2026.
Consumer confidence	Rises steadily until early-2029, then at a slower clip through the end of the forecast.	Remains consistently below the base- line.	Outperforms the baseline through 2032, then remains roughly inline over the rest of the forecast interval.
Oil prices (Dollars/ barrel)	Average price of Brent crude oil fell from \$83/barrel in 2023 to \$81 in 2024. It falls to \$68 in 2025 before declining to \$56 in 2026.	Brent crude oil averages \$67 in 2025 and \$51 in 2026.	Brent crude oil averages \$68 in 2025 and \$60 in 2026.
Stock markets	The year-end value of the S&P 500 rose 23.3% over 2024, and rises 6.9% in 2025 before contracting 7.0% over 2026.	The year-end value of the S&P 500 increases 0.6% in 2025 and drops 7.1% in 2026.	The year-end value of the S&P 500 jumps 9.3% in 2025 and contracts 4.9% in 2026.
Inflation (PCE)	Core personal consumption (PCE) price inflation was 2.8% in 2024, and rises to 3.2% in 2025 and decelerates to 3.0% in 2026.	Core PCE price inflation rises to 3.2% in 2025 and ticks up to 3.3% in 2026.	Core PCE price inflation rises to 3.0% in 2025 and falls to 2.8% in 2026.
Foreign growth	Eurozone GDP growth will edge up to 0.9% over in 2025, while China's growth will fall from 5.0% in 2024 to 4.5% in 2025.	Induced effect from higher tariffs than baseline	Induced effect from lower tariffs than baseline
US dollar	The broad real dollar decreases slowly and steadily until 2027, picking up over the rest of the forecast.	Falls below baseline early on but rises above base in early 2027 and remains above through the rest of the forecast.	Decreases steadily through 2027 but remains above baseline through the forecast.

These materials have been prepared solely for information purposes based upon information generally available to the public and from sources believed to be reliable. No content (including index data, ratings, credit-related analyses and data, research, model, software or other application or output therefrom) or any part thereof (Content) may be modified, reverse engineered, reproduced or distributed in any form by any means, or stored in a database or retrieval system, without the prior written permission of S&P Global Market Intelligence or its affiliates (collectively S&P Global). The Content shall not be used for any unlawful or unauthorized purposes. S&P Global and any third-party providers (collectively S&P Global Parties) do not guarantee the accuracy, completeness, timeliness or availability of the Content. S&P Global Parties are not responsible for any errors or omissions, regardless of the cause, for the results obtained from the use of the Content. THE CONTENT IS PROVIDED ON "AS IS" BASIS. S&P GLOBAL PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Global Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

S&P Global Market Intelligence's opinions, quotes and credit-related and other analyses are statements of opinion as of the date they are expressed and not statements of fact or recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P Global Market Intelligence may provide index data. Direct investment in an index is not possible. Exposure to an asset class represented by an index is available through investable instruments based on that index. S&P Global Market Intelligence assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P Global keeps certain activities of its divisions separate from each other to preserve the independence and objectivity of their respective activities. As a result, certain divisions of S&P Global may have information that is not available to other S&P Global divisions. S&P Global has established policies and procedures to maintain the confidentiality of certain nonpublic information received in connection with each analytical process.

S&P Global may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P Global reserves the right to disseminate its opinions and analyses. S&P Global's public ratings and analyses are made available on its websites, www.standardandpoors.com (free of charge) and www.ratingsdirect.com (subscription), and may be distributed through other means, including via S&P Global publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.
