Contact Sensor

Equipment Costs (Varies depending on the participant)

- Equipment Installations and Setup..... \$750-\$1,250 per participant
- Ongoing Monthly Equipment Expenses..... \$250-\$500 per participant

Staffing & Direct Support at a Glance

- Support staff are able to monitor multiple locations simultaneously.
- Staffing can take place on a PRN or As Needed basis to respond in particular situations when intervention is needed.
- Support staff interact with participants to provide training & oversight using two-way audio/video remotely.
- Staff can provide the level of needed assistance someone needs in a way that is non-invasive, regardless of physical location.
- It IS NOT support professionals watching every move someone makes on a camera.
- IT IS support professionals being able to monitor a prescribed set of events and being able to identify those and then respond as needed.
- A good technology assisted located is one where the technology is invisible to those that live there and those who visit, but provides the same safety and security seen in a traditional residential setting when its needed.
- Some people only need help at very specific times in very specific situations, those people can live independently without having someone with them 24 hours a day, 7 days per week.
- Transportation – Financial Assistance – Shopping – Cooking – Health Management are all things right now that can be managed and monitored remotely by qualified professionals. Giving people the right to take risks and live as independently as possible.
- Families & Natural Support can also be integrated as a response network, not just Support Staff.
- Incorporating technology into support services allows not only Service Providers to optimize how support professionals are utilized but also allows participants to live a life with more privacy.
