

Child Fatality and Near Fatality External Review Panel 2025 Annual Report

**Child Fatality and Near Fatality External Review Panel
125 Holmes Street, 2nd Floor
Frankfort, Kentucky 40601**

EXECUTIVE SUMMARY

The External Child Fatality and Near Fatality Review Panel, hereinafter the panel, is tasked with conducting comprehensive reviews of all child fatalities and near fatalities suspected to be the result of abuse or neglect. This multidisciplinary panel is comprised of twenty-two professionals from the medical, social services, mental health, legal, law enforcement, and other professions who work on behalf of Kentucky's children.

The panel reviews cases referred from the Cabinet for Health and Family Services, Department for Community Based Services (DCBS), and the Department for Public Health. DCBS conducts their own investigation into the fatality or near fatality and determines whether to substantiate abuse or neglect. The panel conducts an external review of these cases independently of the DCBS finding. The panel may also review cases referred from other sources, if the fatality or near fatality is suspected to be a result of abuse or neglect perpetrated by a parent, guardian, or other person exercising custodial control or supervision. The cases reviewed from the Department for Public Health are referred from the local child fatality review teams and the state Sudden Unexpected Infant Death (SUID) team. These cases either were not reported to, or were not accepted for investigation by, DCBS.

As a part of this external review, relevant information is requested from a variety of sources and may include autopsy reports, medical records, law enforcement records, and records held by any Family, Circuit, or District Court. The purpose of these retrospective reviews is to identify systemic deficiencies and to make recommendations for improvements to prevent child fatalities and near fatalities due to abuse and neglect.

This annual report is to be published and submitted to the Governor, the secretary of the Cabinet for Health and Family Services, the Chief Justice of the Supreme Court, the Attorney General, the State Child Abuse and Neglect Prevention Board, and the director of the Legislative Research Commission for distribution to the Interim Joint Committee Families and Children, and the Interim Joint Committee on Judiciary by February 1 of each year as specified in KRS 620.055(10). Furthermore, the panel shall determine a specific agency responsible for implementing the recommendations contained within this report and notify them in writing. The receiving agency has ninety (90) days upon receipt to: 1) respond to the panel with a written intent to implement the recommendation, an explanation of how the recommendation will be implemented, and an approximate time frame; or 2) respond to the panel with a written notice the agency does not intend to implement the recommendation and provide a detailed explanation of why the recommendation cannot be implemented.

The panel met monthly throughout 2025 in order to complete case reviews. Cases reviewed were from state fiscal year 2024 (July 1, 2023, through June 30, 2024). The panel reviewed a total of 248 cases comprised of 72 fatalities and 176 near fatalities. Of the seventy-two fatalities, seven of those cases were reported to DCBS as near fatalities which ultimately resulted in a fatality. Nine of the fatal cases were referred to the panel from the Department for Public Health.

For a greater understanding of the panel's work, all interested citizens are encouraged to read this report and to visit the Justice and Public Safety Cabinet's website (<https://justice.ky.gov/boards-commissions/cfnferp/pages/default.aspx>) for prior years' reports and case summaries.

OVERDOSE—INGESTION CASES

For the last five years, the panel has made numerous recommendations to various agencies to raise awareness and enact prevention efforts related to unintentional pediatric ingestion cases. Despite these efforts, the number of pediatric overdose/ingestion cases reviewed by the panel has increased by 104% over the last five years. As shown in Figure 1, the panel is reporting the highest rates of ingestion cases since its inception. Children under four are at a higher risk for accidental ingestions compared to all other age groups. The average age of overdose/ingestion cases reviewed by the panel was three years old. Sadly, in state fiscal year (SFY) 24, eleven children lost their lives due to being exposed to a dangerous or illicit substance.

The panel continues to track the types of substances most commonly ingested by children. As shown in Figure 2, cannabinoids, fentanyl, and methamphetamine were the most commonly ingested substances in SFY24. Of the fatal cases reviewed by the panel, 64% of those children were exposed to fentanyl. When analyzing the types of substances ingested, the rate of cannabinoid exposure to children in Kentucky has increased 720% in the last five years (see Figure 3). The panel continues to review cases for which the caregivers

seem unaware of the dangers cannabinoid products pose to small children. The panel documented this growing trend in its 2024 Annual Report and recommended the development of a standardized guideline to educate caregivers and providers on proper safe storage. While we applaud the state in its efforts to regulate these products, it is evident stronger regulations and enforcement efforts are needed.

OVERDOSE—INGESTION CASES

The current regulations pertaining to the packaging and sale of medical cannabis and other hemp-derived cannabinoid containing products does require the product to be in a child-resistant package.^{1,2} However, the term child-resistant in the medical cannabis regulation is not defined, nor does it reference the definition for child-resistant packaging used in the regulations governing hemp-derived cannabinoid products.³ The definition in the hemp-derived cannabinoid products requires the package to maintain the child-resistant requirement through multiple openings for any products containing multiple servings. Additionally, the child-resistant requirements in the medical cannabis regulations require a two-step process for initial opening. This requirement is not included in the sale of other hemp-derived cannabinoid containing products. Considering the dangers both of these products pose to young children, the child-resistant requirements should remain consistent throughout all cannabinoid related products.

In response to the panel’s 2024 recommendations, the Kentucky Office of Medical Cannabis created a “how to” guide regarding safe storage of medical cannabis.⁴ The guide encourages the consumer to keep the product in the “child-resistant” packaging from the dispensary and provides the number for Kentucky Poison Control. ***However, it fails to mention these products may be harmful or even fatal to small children.*** The guide should encourage the consumer to obtain a medication lockbox to ensure safe storage of these products. When reviewing the sample edible product label requirements, it does clearly state “Keep Out of Reach of Children” but again fails to adequately warn the consumer how dangerous or potentially fatal these products may be if ingested by children.⁵ Furthermore, there are no regulations around the colors, scents, or flavors that may be used in these products. Finally, many of these products contain Delta-9 THC, which is not currently legal in Kentucky.

For the third year in a row, the panel is recommending an aggressive public safety campaign regarding safe storage of medications and illicit substances, specifically targeting all cannabinoid containing products. It is the panel’s understanding the Department for Public Health is educating families through various programs such as Health Access Nurturing Development Services (HANDS) and Women, Infants, and Children program (WIC). While educating those families is a commendable start, efforts must be more wide reaching. These products are readily available at local retailers and gas stations for purchase without any forward-facing public messaging about the dangers of these products. While a national media campaign would be ideal, there are both urgent needs and multiple opportunities for increased education at the state and community levels.

OVERDOSE—INGESTION CASES

An effective prevention effort must include enhancing enforcement of current laws surrounding these products. In the cases reviewed by the panel, 34% had a documented law enforcement issue. The most commonly identified missed opportunity for law enforcement was failing to investigate. It is important law enforcement agencies are considering applicable criminal charges, such as Endangering the Welfare of a Minor and Wanton Endangerment. Prosecutors should work collaboratively with investigating agencies to ensure the evidence required is properly obtained. If more of these cases were thoroughly investigated, it could potentially assist in identifying those retailers selling these products outside of compliance.

Opportunities missed by medical providers were documented in 26% of all pediatric ingestion cases. The specific issue noted most often was failure to obtain a urine drug screen (UDS) on the child immediately upon arrival at the emergency department. Hospitals routinely use fentanyl when intubating a child and drug screens do not differentiate between fentanyl obtained on the streets or administered in a hospital setting. Therefore, it is imperative for medical providers to obtain the screening upon arrival. The second most commonly noted concern was the lack of timely reporting to child protective services and law enforcement. Medical providers should immediately report any suspected pediatric ingestions to authorities to ensure a timely investigation, although a delay in reporting should not preclude law enforcement investigation.

NF-014-24-NC

This case involved the near fatal overdose/ingestion of THC in a three-year-old child. Index child was transported to a local hospital by EMS due to being unable to be awakened even with stimulation. Upon arrival, the child received two doses of Narcan and was intubated for airway protection. After intubation, the index child developed frothy bloody secretions from the breathing tube and went into full cardiac arrest requiring one round of CPR. The child was transported to a children's hospital and during transport went into full cardiac arrest again. Upon arrival to children's hospital, index child was diagnosed with a pulmonary hemorrhage and received a blood transfusion. Initial urine toxicology screen was positive for cannabinoids. Mother reported the child had ingested the wax piece of her THC dab pen. The pen was newly purchased and reportedly contained 500mg of THC. (although the lack of regulations in these products precludes any ability to know the exact amount contained) The child remained in the PICU for eleven days and then released to an inpatient rehabilitation facility for intensive rehabilitation due to neurological deficits sustained from the ingestion. Law enforcement failed to investigate this case.

Recommendations:

- 1.) The Cabinet for Health and Family Services, Department for Public Health and Office of Medical Cannabis should amend the regulations pertaining to medical cannabis and hemp-derived cannabinoid products to ensure consistency pertaining to the child-resistant packaging requirements. Additional warnings should be required to inform the consumer that “child-resistant” packaging does not mean “child-proof” and these products may be harmful or potentially fatal to children.
- 2.) The Cabinet for Health and Family Services, Department for Public Health and the Office of Medical Cannabis should conduct an aggressive public safety campaign. The campaign should focus on educating caregivers, prescribers, and providing retailers with educational material for consumers regarding the dangers these substances pose to small children.

OVERDOSE—INGESTION CASES

Recommendations Continued:

- 3.) The Department for Public Health, HANDS program should update their educational material to include safe storage of medical cannabis and hemp-derived cannabinoid products (i.e. Protecting Your Child from Harmful Substances).
- 4.) The Office of the Attorney General should work with law enforcement, medical providers, and prosecutors to create a toolkit focused on pediatric ingestions. The toolkit will assist law enforcement officers on how to investigate these types of cases, prosecutors on applicable criminal charges, and medical providers on proper toxicology testing and keeping a high index of suspicion for ingestion if a young child presents with altered mental status.
- 5.) The Office of the Attorney General, through the Prosecutors Advisory Council, should include a training focused on pediatric ingestions at the annual Kentucky Prosecutors Conference.
- 6.) The Kentucky Hospital Association should include a training regarding pediatric ingestions at the 2026 Trauma and Emergency Medicine Symposium.

PHYSICAL ABUSE CASES

As shown in Figure 4, the panel reviewed 55 physical abuse cases from SFY 24, comprising of 22% of all cases reviewed, and representing a 31% increase from the previous fiscal year (42 cases). The majority of physical abuse cases resulted in a near fatal event (76%). Analysis revealed several dominant family characteristics including: DCBS Issues (89%), Financial Issues (82%), DCBS History (73%), Substance Abuse (67%), Mental Health Issues (56%), Criminal History (56%), and Domestic Violence (58%). These findings underscore the complex, interconnected nature of risk factors present in families where severe physical abuse occurs (see Figure 5).

PHYSICAL ABUSE CASES

Financial issues were present in 82% of physical abuse cases, with housing instability noted in 24%. Research demonstrates families facing economic hardship have nearly twice the odds of substantiated maltreatment compared to families without such hardship. Income instability, housing instability, and food insecurity all increase risk for physically aggressive parenting. Kentucky's Family Preservation Program has demonstrated a 96% success rate keeping children safely at home, and continued expansion of flexible funding for concrete supports (housing, utilities, food, transportation) should remain a priority.

Substance abuse in the home was present in 67% of physical abuse cases, with impaired caregivers noted in 22%. Parents with substance use disorders are nearly three times more likely to physically abuse their children.⁶ The Administration for Children and Families identifies six critical touchpoints for addressing substance use: screening, education, prevention strategies, referral to treatment, coordination with providers, and case management. Kentucky's START and KSTEP programs should continue expanding to reduce treatment wait times, and the SOP requirement for mental health assessment alongside substance use treatment reflects best practice for addressing co-occurring disorders.⁷

Mental health issues in a caregiver were identified in 56% of cases. Parental depression increases risk of hostile parenting and physical abuse, and co-occurring mental illness and substance abuse creates a higher risk than either condition alone. Given that 40% of cases showed lack of treatment, agencies must ensure robust referral pathways and reduce barriers to mental health services. The intergenerational transmission of trauma is significant - adults who experienced physical abuse or witnessed violence during childhood are at increased risk for abusive parenting behaviors.⁸

Of the 248 total cases reviewed, Department for Community Based Services, Standards of Practice (SOP) issues were identified in 32 cases (13%). Kentucky's SOP G1.16 (Working with Families Affected by Substance Misuse) is comprehensive, requiring caseworkers to request substance use disorder assessments regardless of drug test results, increase contact frequency with treatment providers, and incorporate treatment plans into case planning. The policy appropriately prohibits punitive approaches to relapse and requires assessments to include the degree to which the parent is impaired in day-to-day functioning—not just caregiving while sober. However, these protocols are not consistently followed. Kentucky DCBS should implement enhanced training and supervision protocols, with regular quality assurance reviews monitoring compliance with treatment provider contact and case planning requirements.⁹

PHYSICAL ABUSE

More than half of the physical abuse cases involved Abusive Head Trauma (AHT). According to the Centers for Disease Control and Prevention (CDC), AHT, including shaken baby syndrome, is a severe form of child abuse that results in brain injury. It often happens when a caregiver becomes frustrated, or angry, due to a child's crying. It is caused by violent shaking and/or blunt impact and nearly all victims suffer long-term health consequences. It is estimated one in every four children who experience this type of trauma, dies. AHT is a leading cause of child abuse deaths in children under 5 years of age.¹⁰

Both medical and child welfare practitioners must understand proper diagnostic imaging protocols when investigating physical abuse. The use of a skeletal survey is considered best practice. The American College of Radiology Practice Guideline for Skeletal Surveys in Children establishes that each anatomic region must be imaged with a separate radiographic exposure to ensure uniform image density and maximize sharpness.¹¹ A single radiograph of the entire infant (*babygram*) must be avoided. Skeletal surveys are necessary when physical abuse is suspected in children under two years and in older children with developmental delays or limited verbal skills. The skeletal survey can identify characteristic injury patterns such as classic metaphyseal lesions ("bucket-handle" and "corner" fractures) and posterior rib fractures, which are highly indicative of abuse. A follow-up skeletal survey approximately two weeks after the initial survey is recommended when clinical suspicion is high, as it increases detection of occult fractures not visible initially.¹² Pennsylvania's child welfare training curriculum includes comprehensive instruction on medical indicators, including the "7 B's" of physical abuse (bruises, burns, bites, bones, brain, belly, brothers).¹³ Kentucky should adopt similar training to improve caseworker identification and assessment of physical abuse.

NF-135-24-C

This case exemplifies the intersection of the above-mentioned risk factors. This case involved the near fatality of a five-year-old child resulting from physical abuse, neglect, sexual abuse, and torture. Injuries noted included severe malnutrition, healing rib fractures, multiple bruises, pancreatic duct injury, and the child tested positive for fentanyl. Both parents had criminal histories including assault and drug offenses, substance abuse issues, a history of intimate partner violence, and the mother reported mental health issues. This case demonstrates how financial stress, substance abuse, mental health issues, and criminal history often co-occur and compound risk for severe child maltreatment.

Recommendations:

- 1.) The Kentucky Multidisciplinary Commission on Child Sexual Abuse should provide an update on the feasibility study conducted based on the panel's 2023 recommendation to expand the Commission's capabilities to review all fatal or near fatal physical abuses in addition to sexual abuse cases.
- 2.) The Cabinet for Health and Family Services, in collaboration with Kentucky's child abuse specialist teams, should develop and implement a comprehensive, standardized training curriculum on medical indicators of child physical abuse for both child welfare caseworkers and medical professionals. This training should include instruction on the American College of Radiology and American Academy of Pediatrics guidelines establishing that skeletal surveys—not single-image babygrams—are the required standard for evaluating suspected physical abuse in children 24 months of age and younger. The curriculum should incorporate additional training for identifying physical abuse indicators, including the Ten-Four FACES-P.

PHYSICAL ABUSE

Recommendations Continued:

3.) The Department for Community Based Services should implement a monitoring system to track caseworker and supervisor compliance with SOP G1.16 (Working with Families Affected by Substance Misuse). This could be added to the already structured continuous quality improvement (CQI) system within the department. This system should offer a data dashboard accessible to supervisors and regional administrators to track key performance indicators including timeliness of substance abuse assessments, frequency of treatment provider contacts, and case plan integration of treatment goals, as well as regular feedback loops where findings are shared with frontline workers and supervisors to support practice improvement. This monitoring framework aligns with the National Center on Substance Abuse and Child Welfare’s recommended six touchpoints for addressing substance use (screening, education, prevention strategies, referral to treatment, coordination with providers, and case management) and the Administration for Children and Families’ emphasis on fidelity monitoring as essential to effective child welfare practice.

DEPARMENT FOR COMMUNITY BASED SERVICES

In SFY 2024, the panel examined casework quality and practice prior to, during, and after the fatal/near fatal incident occurred. The panel identified opportunities for improvement, noted as "DCBS issues," in 73% (182) of all 248 cases reviewed. These opportunities are examined to focus on prevention, systemic issues, and statewide improvement within agencies, including the DCBS, also commonly referred to as Child Protective Services (CPS).

Of the cases reviewed, 63% (156) were found to have prior history with DCBS. While prior history does not equate to agency error, the panel closely examines the nature and extent of prior CPS involvement and casework.

DEPARTMENT FOR COMMUNITY BASED SERVICES

The panel documented 63 cases had referrals that Did Not Meet Criteria (DNMC) which were questionably screened out. One identified issue is screened out or DNMC reports, which are not consistently forwarded to supervisors and workers assigned to active cases involving the same family. This issue is documented by the panel as a lack of internal communication (see Figure 6). DCBS has reported implementing changes to ensure supervisors are notified. An additional concern involves reports made by active CPS workers which are subsequently screened out. When a caseworker with policy knowledge and direct involvement with a family determines a new report is warranted, the decision to screen out such a report warrants further examination.

Timely completion of fatality and near fatality investigations remains a critical concern. These cases are complex and often take longer than typical investigations; however, timely resolution is essential for families and case outcomes. For SFY 2024, the average time to complete fatality and near fatality cases was 230 days statewide. While the statewide average time to completion slightly decreased, the time to completion increased in Jefferson County. Jefferson County, consistently has the highest caseload assignments in the state, averaged 395 days for case completion.

Delays in case completion negatively impact families. Extended waiting periods can cause confusion, uncertainty, and disillusionment, particularly when casework halts or significantly slows. High caseloads and staff turnover directly contribute to these delays. When a CPS worker leaves the agency, cases may not be reassigned promptly, and reassignment often occurs without documentation or case notes, requiring the new worker to essentially restart the investigation. This leaves families in limbo and creates gaps in services and contact with no documented explanation. DCBS SOP G1.5 provides guidance for various consultations and specifically for Family Services Office Supervisor (FSOS) during investigations. This SOP requires at least monthly consults between worker and supervisor to be documented on the Investigative Consultation Form. Items to be addressed during these consults is completion of all identified tasks and/or actions and if not completed, to address barriers, strategies, and likely date of completion. The uploading of these forms to the TWIST system could assist in explaining gaps in services/contacts and the reasons for these delays.

The panel continues to have significant concerns regarding high caseloads, staff turnover, and worker burnout. KRS 199.461 requires DCBS to report caseloads exceeding 25 active CPS cases per worker for more than 90 consecutive days. During the most recent quarterly report, the statewide DCBS caseload averaged 32 for the month of July, 30 in August, and 32 in September, exceeding the recommended threshold. The report further states that 36 counties and five of the nine regions exceeded the caseload restrictions. This is a decrease from the prior quarterly report. While salary increases for new workers and supervisors have improved recruitment, pay inequities have emerged for tenured staff, with some now earning less than newly hired employees. This has contributed to turnover among experienced staff and management. The pay equity issue continues to be assessed by the agency, the Administration, and the General Assembly.

In 2024, the panel found home visits and/or investigative interviews were being conducted by phone or video conference contrary to SOP. In response to the panel's 2024 recommendations, DCBS implemented SOP G1.35, Alternative Methods of Communication, which establishes the use of technology such as phone, Zoom, and other virtual formats to enhance family engagement. The policy emphasizes that while these alternative communication methods support engagement with families and community partners, they do not replace mandated face-to-face contact. As shown in Figure 6 as Phone/Virtual Contacts, the panel continues to track this issue and noted a slight decline from last year's report.

DEPARTMENT FOR COMMUNITY BASED SERVICES

In SFY24, the panel reviewed eleven cases involving firearm injuries to children, nine of which resulted in fatalities. While this represents a reduction from previous years, the reason for this decline is unclear. When comparing panel firearm cases to Kentucky's Statewide Child Fatality Review (CFR) firearm cases, the overall number of firearm injuries reviewed by the state CFR team has remained consistent. It should be noted the statewide CFR team reviews all child fatalities and firearm injuries to children not resulting in a fatality are excluded from this data (see Figure 8). Despite these cases not being referred to the panel for review, firearm safety and safe storage remains a critical issue. Currently, DCBS SOP C2.8 requires CPS workers to assess homes for safe storage of medications; the panel recommends adding a separate guideline within this SOP specifically addressing safe firearm storage assessments. A standardized checklist could assist CPS workers in completing these assessments consistently.

Additionally, the HANDS (Health Access Nurturing Development Services) program guidelines contain relevant firearm safety information that should be prominently incorporated into DCBS practice, rather than included merely as a supplemental resource within the SOP. Elevating this guidance would ensure frontline staff are equipped to address firearm safety proactively during family contacts and safety planning.

A new and alarming issue that has come to the panel's attention is infant deaths related to Vitamin K Deficiency Bleeding (VKDB). VKDB occurs when an infant cannot stop bleeding because their blood does not have enough vitamin K to form a clot.¹⁴ According to the American Academy of Pediatrics (AAP), intramuscular administration of vitamin K for prevention of VKDB has been the standard of care since 1961.¹⁵ Healthcare professionals recommend all newborns receive a vitamin K injection at birth, as infants who do not receive this injection are **81 times** more likely to develop late VKDB, which can occur without warning up to six months of age and may result in life-threatening brain hemorrhage or death. The panel reviewed cases in which parental refusal of vitamin K resulted in the infant's death or near death. Parental refusal has become increasingly common, often due to disinformation on social media and misunderstanding the risks involved. The panel recommends enhanced education efforts across multiple fronts: CPS central intake staff should receive training on the risks associated with vitamin K deficiency to appropriately screen these reports; medical providers and midwives should be required to report parental refusal of vitamin K to CPS; and the importance of vitamin K administration should be incorporated into parenting education programs during prenatal medical visits. Increased awareness and education are essential to preventing future fatalities in this emerging area of concern.

DEPARTMENT FOR COMMUNITY BASED SERVICES

NF-141-24-C

This case involved the near fatal overdose/ingestion of amphetamine and methamphetamine in a two-year-old child. The mother admitted to allowing the child to drink from a cup that contained “bong water”. The family was living in a hotel and the father admitted to smoking methamphetamine daily. During the course of the investigation, a new referral was received on the family which was screened out. The investigative social service worker did not visit the home until three months after the incident, and then again two months after that date. There were gaps in face-to-face contacts with the ongoing worker, including a three-month gap in face-to-face home visits. Reasons for gaps or delays were not noted in the record.

Recommendations:

- 1.) The Department for Community Based Services should implement the practice of uploading supervisory consults into the TWIST system to assist in addressing gaps in services/contacts and reasons for these delays or gaps. This measure would also assist other staff, as well as newly assigned staff, in gathering information and needs for the case. In addition, the supervisory consults should be shared with the panel and included in the list of records provided to the panel under SOP C2.13.
- 2.) The Department for Community Based Services should add a separate guideline within SOP C2.8 to specifically address safe firearm storage assessments. A standardized checklist could assist CPS workers in completing these assessments consistently and should be prominently incorporated into DCBS practice, rather than included merely as a supplemental resource within the SOP.
- 3.) The Kentucky Board of Nursing through the Licensed Certified Professional Midwife (CPM) program, should develop a standardized protocol which includes the importance of vitamin K within parenting education and pre-natal medical visits.
- 4.) The Department for Community Based Services should include a parent’s refusal of the vitamin K shot at birth as part of the medical neglect criteria in SOP C2.3.

MEDICALLY COMPLEX CHILDREN

The panel defines a medically fragile child as any child with a complex medical condition, including but not exclusive to, medical conditions that could rapidly deteriorate resulting in permanent injury or death. Hereafter, this population will be referred to as children with medical complexity (CMC).

In SFY 2024, the panel reviewed 43 cases involving CMC. The types of cases most commonly identified for CMC were Neglect (84%), Overdose/ingestion (26%), Physical abuse (23%) and Failure to thrive/malnutrition/starvation (combined 19%). It is also important to note half of the sexual abuse cases reviewed the panel involved a child with medical complexity. Characteristics such as DCBS issues, financial issues, DCBS history, and mental health issues were more prevalent in the CMC cases than all other cases reviewed by the panel (see Figure 9.) These findings align with national research on CMC cases.

Two additional findings merit attention. Medical issues appeared in 44% of CMC cases, which is a significant proportion given these concerns fall primarily under the responsibility of healthcare providers. Additionally, law enforcement related issues were identified in 26% of CMC cases, reinforcing the need for training extending beyond any single profession to include any systems interacting with at-risk families.

While CMC comprise only approximately 1-5% of the pediatric population, they account for up to one-third of all pediatric health care spending. These children typically require care from numerous service providers across multiple disciplines, including primary care physicians, pediatric medical subspecialists, surgical specialists, home nurses, rehabilitative and habilitative therapists, and community-based services.

Research consistently demonstrates children with medical complexity face significantly elevated risks of maltreatment compared to the general pediatric population. Studies indicate children with disabilities are approximately 2-4 times more likely to experience abuse and neglect than children without disabilities.¹⁶

MEDICALLY COMPLEX CHILDREN

Research documents types and patterns of maltreatment:

- Neglect is the most common form of substantiated maltreatment, followed by physical abuse, sexual abuse, and emotional abuse.
- Many CMC experience multiple types of maltreatment simultaneously.
- CMC typically endure longer periods of maltreatment (often years) before identification.
- Children with multiple medical disabilities experience the most severe forms of abuse and neglect.
- Over half (53%) of abused children in studies were under 4 years old when maltreatment was first identified.¹⁷

The inherent vulnerability of CMC stems from the nature of their disabilities. Severe functional limitations and limited or no mobility prevent children from physically escaping perpetrators. Communication impairments prevent disclosure of maltreatment, and intellectual disabilities impair insight into abusive or neglectful actions. CMC may be perceived as having higher pain tolerance, leading to harmful physical actions. Their high dependency on others may foster excessive compliance and diminished understanding of offender motives, particularly regarding sexual abuse.¹⁸

Caregivers of CMC face tremendous physical, psychological, and economic burdens. Research shows caregivers spend up to 20 hours per week providing direct home care plus additional hours coordinating services. Compared to caregivers of children with less complex needs, caregivers of CMC are nearly 30 times more likely to need to stop working and 11 times more likely to report delays in care due to costs.

Specific caregiver risk factors associated with child welfare involvement include:

- Mental health issues (anxiety, depression, difficulty coping)
- Chronic medical conditions or physical limitations
- History of interpersonal violence or trauma
- Single-parent household status
- Sleep deprivation from round-the-clock care demands
- Limited social and community support networks¹⁹

The interface between child welfare and healthcare systems present both opportunities and challenges for protecting CMC.²⁰ Medical providers serve as mandated reporters and often have frequent contact with these families, increasing the likelihood of identifying concerns. However, there are factors which complicate this intersection.

The more medically complex the patient, the more elusive the diagnosis of maltreatment may be. Distinguishing between symptoms of underlying conditions and indicators of abuse or neglect requires specialized expertise. Effective care for CMC requires specialized training across multiple professional groups and settings.

Pediatric residency, postgraduate, and continuing education should include standardized learning modules specific to CMC management - covering nutrition, development and function, care coordination, technology management, telehealth, coordinated handoffs, and patient- and family-centered care. Training should emphasize a whole-child approach with attention to how conditions interact with environmental and personal modifiers.

MEDICALLY COMPLEX CHILDREN

Programs such as the Medically Complex Training Program at the University of Kentucky provide specialized training for foster and adoptive parents, nurses, and social workers caring for children with complex medical needs. These programs emphasize medically complex children require higher levels of commitment and care, with a focus on child safety.²¹ It is unclear if this resource is being utilized by DCBS for staff training regarding investigation and case management. During the panel's review of these cases there was documentation of DCBS workers reporting they did not feel they had the knowledge needed to perform their duties as it involved CMC and maltreatment. Child welfare staff need education on the complex nature of CMC and their health care needs, including the importance of essential medications and follow-up care. In some cases reviewed, DCBS did not obtain child abuse specialist consults despite the complexity of these cases. Child welfare investigators should be encouraged to consult with a child abuse pediatrician at either of Kentucky's pediatric forensic medicine programs when investigating cases involving medically complex children as best practice by DCBS and for the best outcomes.

The medical home concept serves as the foundation for optimal care of CMC, emphasizing care which is accessible, family-centered, continuous, comprehensive, coordinated, compassionate, and culturally effective.

Key components of comprehensive care:

- A designated care coordinator who serves as the identified contact for CMC and their families
- A consistent medical provider able to perform medical home functions
- Patient registries to proactively identify and manage CMC
- Care plans jointly developed by families and providers
- Continuous access to knowledgeable providers via phone, telehealth, or secure online access
- Integration of palliative care services from the time of diagnosis, not reserved for end of life

Recognizing children are best helped by helping their caregivers, multilevel support services are essential to decrease caregiving burden and increase coping capacity. Healthcare providers should routinely screen caregivers for physical and mental health status, parenting stress, social support, exposure to violence and trauma, and other risk factors. This normalizes struggles and systematically identifies those requiring more intensive clinical assessment and treatment.

Effective prevention and intervention strategies must include comprehensive team-based care centered on the medical home model, robust training programs for all professionals involved in CMC care, support services for caregivers to prevent burnout and strengthen families, and policy reforms to ensure adequate resources and appropriate payment models. By recognizing the unique vulnerabilities and needs of CMC and their families, systems can work together to protect these children and promote their health, development, and well-being.²²

Recommendations:

1.) The Department for Community Based Services should enhance current Standards of Practice (SOP C7.21) to include the use of Regional Nurse Consultants, as well enhance current SOP C2.8 Investigation Protocol to include Practice Guidance for CMC. Practice Guidance should include, but not be exclusive of, Regional Nurse consultation and development of a resource for workers to reference for additional information.

MEDICALLY COMPLEX CHILDREN

Recommendations Continued:

2.) The Department for Community Based Services should enhance current Standards of Practice (SOP C2.19) Pediatric Forensic Medicine Consultations to include cases involving medically complex children as a priority to pediatric forensics, following regional nurse consultation, to ensure reserving this specialty for necessary cases.

3.) The Department for Community Based Services, in collaboration with the University of Kentucky Social Work training center (or other appropriate entity), should develop and implement a comprehensive, standardized training curriculum on medically complex children for child welfare workers. This training should include initial certification and annual continuing education, to include topics of defining medical neglect, caregiver burden assessments, distinguishing symptoms from abuse/neglect indicators, and working alongside medical care teams.

4.) The Office for Children with Special Health Care Needs, in collaboration with the Department for Public Health, Department for Medicaid Service, and the Kentucky Hospital Association, should develop a statewide patient registry to enable coordinated care across systems and assist in early identification of at-risk families. This would include developing standardized criteria for identification based on diagnosis, creating data sharing agreements, and implementing flags in the registry to identify multiple risk factors for maltreatment. Implementation of such a system should require annual reporting on trends, child welfare involvement rates, and outcomes.

NF-060-24-C

This case involved the near fatality of an 8-year-old child resulting from medical neglect, hygiene neglect, supervision neglect, malnutrition, and sexual abuse. The child was cared for primarily by mother, who resided with paternal relatives of child, due to ongoing domestic violence issues with the father. Paternal relatives denied caring for the child, advising the child was isolated in a back bedroom with the door kept shut. Maternal grandparents reported being concerned for the care of the child due to the child's physical condition a few months prior and mother's reported substance use. No reports were made to authorities by family prior to this event. Injuries/illness included severe starvation, weighing 22 pounds, the average weight of a 17-month-old, as well as severe pressure ulcers that had eroded to the bone, kidney stones, acute kidney injury, extensive dental decay, and severe joint contractures in all extremities. Child was later found to have chlamydia, pneumonia, pelvic abscess, and refeeding syndrome due to the prolonged starvation. Mother and father were charged with Criminal Abuse 1st Degree and father was also charged with Rape 1st and Incest, Sexual Abuse 1st, 2 counts.

According to records, the child had not been seen by any medical provider for 18 months, missing multiple appointments despite complex diagnoses and had not received any in-home services since the age of 3 year. DCBS had screened out a report with concerns for neglect and skin breakdown, missing an opportunity for intervention, and the medical community did not implement a follow-up mechanism when child ceased attending appointments.

This case demonstrates the need for a monitoring system for medically complex children, as well as a need for training and improved coordination amongst professionals.

PLAN OF SAFE CARE

As discussed in prior reports, the Plan of Safe Care (POSC) is a federally mandated practice designed to ensure the safety and well-being of an infant with prenatal substance exposure by addressing the health and substance use treatment needs of *both* the infant and affected family or caregiver.²³ As shown in Figure 10, the panel noted a slight decrease in Substance Exposed Infants (SEI), yet a slight increase in those infants diagnosed with Neonatal Opioid Withdrawal Syndrome (NAS/NOWS). Similarly, the Kentucky Public Health Neonatal Abstinence Syndrome (NAS) Reporting Registry also reported a slight decrease. In 2024, they reported 741 cases versus 792 cases reported in 2023.²⁴

The panel continues to collect data regarding the type of drug involved in the prenatal exposure. This data is based on the child testing positive for substance at delivery, drug screens administered to the mother, or through self-report. Figure 11 shows the percentage of in utero drug exposure types documented in SFY24. **It's important to note the panel is reporting an almost 30% increase of in utero cannabinoid exposure.** It is often noted during case reviews, mothers using cannabis to treat nausea and vomiting during pregnancy. According to the American Academy of Family Physicians there is no known safe amount of cannabis use during pregnancy. Medical providers need to continue to counsel patients about the potential health effects of in utero exposure, which may include low birth weight.²⁵ As documented in panel cases, 24% of substance exposed infants were premature.

PLAN OF SAFE CARE

While the panel continues to advocate for a robust plan of safe care, Kentucky has made steps in improving their continuum of care. The Kentucky Department for Behavioral Health, Developmental, and Intellectual Disabilities (DBHDID), Plan of Safe Care Initiative is a coordinated, collaborative approach utilizing the Regional Community Mental Health Centers. As part of this program, each region meets monthly with community partners to engage and support the specific needs of the families affected by substance use disorder.²⁶ In addition, the Department for Community Based Services has a comprehensive policy to address the plan of safe care regarding substance exposed infants reported to CPS. SOP C3.9 includes referring the family to services such as, Kentucky Strengthening Ties and Empowering Parents (KSTEP), Sobriety Treatment and Recovery Team (START), Health Access Nurturing Development Services (HANDS) and KY-Moms MATR (Maternal Assistance Towards Recovery). The policy requires the safety and/or prevention plan includes specific steps related to the caregiver's *high-risk* behaviors and encourages a release of information be obtained by treatment providers. Unfortunately, in the majority of the cases reviewed by the panel this policy is not consistently followed. As cannabinoid use has become more prevalent, concerns have been noted that THC use may not consistently be considered high-risk behavior. DCBS should ensure all substance exposed infants, regardless of the type of substance, are being referred to services in accordance with policy.

DCBS SOP G1.16 Working with Families Affected by Substance Misuse procedure encourages the worker to request a signed release of information for treatment providers. However, this is not often obtained in cases reviewed by the panel. The release of information is imperative to ensure the parent's compliance with the program and to ensure the child's safety in the home. DBHDID and DCBS should collaborate with service providers during the monthly POSC meetings to create a standardized release of information for clients with ongoing CPS involvement. This will eliminate the burden from the client having to obtain the release, sign it, and return it to DCBS.

PLAN OF SAFE CARE

Lack of HANDS referral continues to be an ongoing concern noted by the panel. The HANDS program is a voluntary home visitation program that provides services from pregnancy and up to three years of age.²⁷ Prior to the pandemic, HANDS providers were meeting with families at the birth hospitals and educating them on services provided. Post pandemic, this practice does not appear to happen consistently across the state. Allowing HANDS representatives face-to-face contact with families may increase enrollment rates and ensure wrap-around services post discharge.

Recommendations:

- 1.) The Kentucky Perinatal Quality Collaborative (KyPQC) should include a keynote address in the 2026 Kentucky Symposium for Maternal and Infant Outcomes on the Plan of Safe Care. The keynote should encourage prenatal care providers to participate in their local community's POSC and educate patients on the available community resources to support expecting mothers with substance use disorders.
- 2.) The Department for Behavioral Health, Developmental and Intellectual Disabilities, Plan of Safe Care program and DCBS should work with community treatment providers to develop a standardized release of information to reduce the burden on clients.
- 3.) The Department for Community Based Services should encourage staff to continue to treat THC use as a high-risk behavior and follow policy accordingly.
- 4.) HANDS should work with the Kentucky Hospital Association to create a partnership that allows a HANDS representative to engage with the family at the birthing hospital.

F-004-24-C

This case involved the fatal overdose/ingestion of fentanyl in a 13-month-old child. At the time of the event the child resided with mother and six siblings. The child's postmortem toxicology was positive for 4-ANPP, a metabolite of fentanyl. Due to the positive screen, child abuse specialist recommended the surviving siblings be tested. Three of the siblings could not receive a hair toxicology due to not having enough hair to sample. The other three siblings all tested positive for fentanyl. All seven children had tested positive for an illicit substance at birth and were reported to CPS. Four of the seven children were positive for THC at birth. There was an active investigation at the time of the fatality due to the index child being born substance exposed. There was no Plan of Safe Care in place when this child was discharged from the hospital despite the mother's extensive substance use history.

DEMOGRAPHICS

The panel has continuously found children four years of age or younger are at higher risk for a fatal/near fatal event due to child maltreatment. Since 2014, 76% of all cases reviewed by the panel were children four years or younger. Prevention efforts should continue to target these higher risk age groups.

FINDINGS AND DETERMINATIONS

The panel designates the categorization or type of case, identifies the family characteristics associated with the fatality or near fatality, and makes a final determination of whether abuse or neglect exists and its type. The following pages provide findings specific to state fiscal year 2024 (SFY24) case reviews. Each case may encompass multiple categories and findings.

Final Categorization All Cases SFY24 n= 248

Category	Fatalities	Near Fatalities	Total
Neglect	57	137	194
Overdose/ingestion	11	87	98
Physical Abuse	13	42	55
Abusive Head Trauma	3	25	28

Gunshot accidental	6	2	8
Burn	3	2	5
Sexual abuse/human trafficking	1	3	4
Suicide Child	0	3	3
Gunshot (homicide)	3	0	3
Smoke inhalation/fire	3	0	3
Undetermined	2	0	2
Blunt Force Trauma-not inflicted MVC	1	0	1

Data Source: Child Fatality and Near Fatality External Review Panel Data

*Cases may be captured in more than one category. "Other" includes Filicide (2), Asphyxia (which may include positional and mechanical) (5), and Malnutrition/Starvation (7). MVC indicates motor vehicle collision.

KEY FINDINGS SFY24

→ The most commonly found family characteristics in a fatality/near fatality in order of precedence for SFY24 cases reviewed:	→ 82% of all cases reviewed involved a child four (4) years of age or younger.
–Financial Issues (75%)	→ 46% of all cases with a panel determination of Neglect (medical) involved an overdose/ingestion case.
–DCBS Issues (73%)	→ 71% of Abusive Head Trauma cases involved substance abuse by the caregiver.
–DCBS history (63%)	→ 50% of the sexual abuse cases involved a medically fragile child.
–Substance abuse (in home) (55%)	→ 69% of all Drowning/near-drowning cases involved a caregiver with a mental health issue.
–Substance abuse (caregiver) (54%)	→ 82% of all Physical abuse cases involved a family with financial issues.
–Environmental neglect (52%)	
→ Neglect (general) was the most common panel determination.	
→ 91% of all Overdose/ingestion cases involved environmental neglect.	

Panel Determinations All Cases SFY24

Data Source: Child Fatality and Near Fatality External Review Panel Data

Findings Specific to Fiscal Year 2024

The chart below shows the number of cases for which the finding included circumstances that made the incident potentially preventable. Of the 72 cases involving a child fatality, the panel determined that 86% of those fatalities were potentially preventable. Among the near fatality cases, 80% were determined to be potentially preventable. Overall, the panel found 81% of these incidents may have been prevented.

Potentially Preventable Fatalities and Near Fatalities SFY24

*Cases may be represented in multiple categories. Other includes multi-jurisdictional investigation (1), lack of transportation (9), malnutrition/starvation (3), COVID (2), emotional abuse (1), statutory guideline not followed (1), lack of interpreter (1), and daycare concerns not addressed (1).

PANEL MEMBERS

Hon. Benjamin Harrison, Chair
Lewis County Attorney

Senator Danny Carroll, District 2
Senate Families and Children Committee Chair

Dr. Melissa Currie,
Child Abuse Pediatrician
Norton Children's Pediatric Protection Specialist
Professor and Kosair for Kids Endowed Chair for
Pediatric Forensic Medicine
University of Louisville School of Medicine

Victoria Bengel, Executive Director
CASA of Madison and Clark Counties

Dr. Jaime Pittenger Kirtley,
Prevent Child Abuse Kentucky

Honorable Libby Messer,
Fayette Family Court Judge

Dr. Christina Howard, Child Abuse Pediatrician
University of Kentucky Department of Pediatrics

Geoff Wilson,
Association of Addiction Professionals

Hon. Olivia McCollum, Assistant County Attorney
Boone County Attorney's Office

Dr. Danielle Anderson, Assistant Professor of Psychiatry
Supportive Mental Health and Addiction Recovery
Treatment

Mark Hammond,
President, Kentucky Coroners' Association

Representative Samara Heavrin, District 18
House Families and Children Committee Chair

Lesla Dennis, Commissioner
Department for Community Based Services

Lieutenant Jonathan Murphy,
Kentucky State Police

Dr. Lyndsey Neese, Director
Department for Public Health

Dr. William Ralston,
Kentucky State Medical Examiner

Heather McCarty, Regional Program Manager
Family Resource and Youth Service Centers

Brittany Nichols,
Department for Public Health

Steve Shannon,
Kentucky Association of Regional Programs, Inc.

Dr. Elizabeth Salt,
Citizen Foster Care Review Board

Olivia Spradlin, Senior Program Specialist
ZeroV

Nikki Smith Abbott, LCSW
Astra Behavioral Health, LLC

MEMBERS WHO LEFT THE PANEL IN 2025

Detective Jason Merlo,
Kentucky State Police

Dr. Henrietta Bada,
Department for Public Health

Janice Bright, RN
Department for Public Health

Matt Belcher,
Department for Public Health

PANEL STAFF

Elisha Mahoney, Executive Staff Advisor
Justice & Public Safety Cabinet

Cynthia Hildebrandt, Case Analyst
Justice & Public Safety Cabinet

Logan McChesney, Administrative Specialist
Justice & Public Safety Cabinet

Cynthia Curtsinger
Pediatric Forensic Case Analyst

Jennifer Burke, Case Analyst
Justice & Public Safety Cabinet
