Research Report No. 454

Legislative Research Commission
Frankfort, Kentucky
lrc.ky.gov

Accepted September 18, 2018,
by the Education Assessment and Accountability Review Subcommittee

Paid for with state funds. Available in alternative format by request.
Foreword

There are few public policy issues that resonate with Kentucky constituents more than education. The Office of Education Accountability (OEA) fulfills an important legislative oversight role for this important public policy issue. Born from the 1990 Kentucky Education Reform Act, OEA fulfills two major education needs: investigating allegations of wrongdoing in public education, and researching topics related to elementary and secondary public education. This report is an important component of the OEA 2018 research study agenda, as set by the Education Assessment and Accountability Review Subcommittee.

This report examines homeschooling in Kentucky. Chapter 1 provides an overview of the current landscape for homeschooling in the commonwealth and sets out the conclusions reached by the study team. Chapter 2 looks at trends for homeschooling within Kentucky, set within the context of national trends, proceeding to a summary of tracked outcomes. Chapter 3 looks specifically at the laws that allow for homeschooling and compares Kentucky’s legal framework for homeschooling with the frameworks in other states.

The Office of Education Accountability would like to thank the Cabinet for Health and Family Services, the Administrative Office of the Courts, the Kentucky Department of Education, and those in the homeschooling community for their assistance with this report.

Thank you for your interest in this report.

David A. Byerman

Summary

Background

Home school enrollments are growing in Kentucky and the nation. Home school advocates cite academic and social benefits of educating children at home, and the freedom it provides for families who wish to educate their children outside the formal structures of public, private, or parochial education. Public school officials, while acknowledging the quality of education in many home schools, worry that some families falsely claim to be homeschooling.

This report provides home school enrollment data for Kentucky and outcome data for the minority of home school students for whom it is available. Complete or representative outcome data for home school students are not available in Kentucky or the nation. The report also compares Kentucky’s legal requirements for home schools with those in other states and reports challenges in the implementation of Kentucky laws that require compulsory school attendance and protect children’s fundamental right to educational instruction.

Data In The Report

At 3.6 percent, the percentage of school-aged children who are homeschooled in the commonwealth slightly exceeds the 3.3 percent estimated for the nation. Home school enrollment varies substantially among Kentucky districts, ranging from less than 1 percent to over 10 percent. Home school enrollment has increased in most districts in recent years. These increases reflect parents’ concerns about the social environment in public schools, school safety, and, for some, the perception that they cannot trust the information being provided by public schools. Sharp increases, beginning in 2015, in the number of high school students who transferred from public school to home school may be associated with the changes that were to go into effect in most districts in 2016, raising the legal age to drop out of school from 16 to 18.

Although outcome data are not available for most K-12 home school students, the Kentucky Council on Postsecondary Education collects outcome data for Kentucky home school students who take college classes, either as high school students or after high school graduation. Home school students who enroll in postsecondary institutions earn higher GPAs than do their public or private school counterparts, whether in dual-credit high school classes or in college classes. As first-year college students, 61 percent of Kentucky home school graduates earned GPAs of 3.5 or above in 2017, compared to 41 percent of recent public school graduates. Home school students enrolled in Kentucky postsecondary institutions also had higher ACT composites than their public school counterparts, earning an average ACT composite score of 23.9, compared to 22.5 for public school graduates. However, the data may not be representative of all homeschoolers, as only approximately one-fifth of Kentucky home school graduates attend college in Kentucky. Academic outcomes for the majority of home school students are simply unknown.

---

*a This figure is calculated based on all children ages 5-17 according to a US Census estimate.*
The report also provides data supporting the claims of directors of pupil personnel (DPPs) that some families may be reporting their children as homeschooled as a way of avoiding legal consequences for public school truancy. Almost one-third of the students who transferred to home school from public schools in 2017 were absent 20 percent or more of their enrolled days at the time of their transfer. Because DPPs are required to visit the homes of truant public school students, they often have experience with families who ultimately withdraw their children to home school, and they worry that the conditions they observe in the home—lack of parental education or of instructional materials—make it unlikely that the homeschooled children will be educated.

**Legal Requirements**

A family that wishes to homeschool in Kentucky must notify the school district of a child’s home school enrollment. No minimum level of education for home school instructors is required. Although required by law to teach a variety of subjects and for a duration at least as long as the public school term, home schools are not required to regularly submit any evidence that they are complying with these requirements. Home schools are, however, required to keep scholarship and attendance reports that are open to inspection by DPPs.

The legal requirements that apply to Kentucky home schools are higher than those in surrounding states Illinois, Indiana, and Missouri and in many states across the nation that do not require home schools to report enrollment or teach specific subjects. Kentucky’s home school requirements are lower than those in surrounding states Ohio and West Virginia, and lower than at least one homeschooling option in Virginia and Tennessee. These surrounding states require home school instructors to have at least a high school diploma or be otherwise qualified and to submit evidence, such as standardized test scores, that students are learning.

**Implementation Challenges For Home School Accountability**

In Kentucky, as in many other states, the laws that apply to home schools exist in a complex environment caused by tension between parents’ rights to freedom of religion or conscience in determining the education that is appropriate for their children and government officials’ obligation to enforce laws that require children to be educated. The responsibility for implementation of laws that require children to be educated in the commonwealth, as those laws apply to home schools, is divided among DPPs, the Cabinet for Health and Family Services (CHFS), local courts, and private individuals who are concerned that a child is not being educated. As reported by DPPs, implementation of these laws varies substantially among districts, as does the likelihood that changes will be effected in a home school that does not appear to be educating.

DPPs are charged statutorily with the duty to enforce compulsory attendance laws for all children in their district, but approximately half of DPPs disagree that they have the practical ability to carry out this duty with homeschooled children. As described in detail in Chapter 3, DPPs have limited authority to monitor the education being provided by home schools and no authority to require changes in home schools that do not appear to be educating.
Accountability for home schools that may not be educating their students rests ultimately with CHFS and the local courts; under Kentucky law each entity has the authority to determine whether a child is not being adequately educated and thus educationally neglected. Home school advocates cite these laws as an adequate mechanism to provide accountability for home schools.

As reported by DPPs, the likelihood that a home school that is not educating a student will face consequences varies substantially among districts depending, especially, on how local CHFS workers and judges address reports of educational neglect.

The chapter describes a variety of challenges to the implementation of Kentucky laws related to compulsory school attendance and educational neglect. These include:

- lack of clarity in DPPs’ roles in monitoring and reporting concerns related to attendance and scholarship reports;
- time constraints on DPPs, CHFS workers, and local judges; and
- lack of clarity in the law about what would constitute an adequate scholarship or attendance report from a home school.

Statute authorizes, but does not require, the Kentucky Board of Education and the Kentucky Department of Education (KDE) to take steps that might add some clarity to home school requirements, and it authorizes, but does not require, KDE to play a role in inspecting attendance and scholarship reports. Neither the board nor KDE has acted on these authorities.

In 1997, a “Best Practices Document” was developed by a task force that included representatives from the Christian Home Educators of Kentucky and the Kentucky Home Education Association, DPPs from four Kentucky districts, and the KDE liaison for nonpublic schools; the document has been updated since then. The document was developed to provide some guidance, clarity, and common understanding of home school laws for home school parents and DPPs. Many DPPs are not aware of the “Best Practices Document.” Others are aware of the document but unsure of whether it constitutes legal guidance or informal guidance. The “Best Practices Document” does not address the role of CHFS or the courts.

**Major Findings**

The report highlights five major findings:

**Finding 3.1**

_KRS 159.040 authorizes the Kentucky Board of Education to play a role in establishing criteria required for attendance and scholarship reports that apply to all schools. The board has not proposed regulations for the keeping of scholarship reports._
Finding 3.2

KRS 159.040 requires home schools to keep attendance in a register provided by the Kentucky Board of Education. The board does not provide home schools with an attendance register.

Finding 3.3

KRS 159.040 allows the Kentucky Department of Education to play a role in inspecting attendance and scholarship reports. KDE does not currently play such a role.

Finding 3.4

The “Best Practices Document” developed in 1997 and updated since then attempts to provide clarity to homeschooling families and DPPs. The document was developed by a task force that included members of statewide home school organizations, DPPs, and a representative of the Kentucky Department of Education. Many DPPs either are not aware of this document or are confused about whether it represents law or whether it represents suggested practices.

Finding 3.5

By law, the Cabinet for Health and Family Services and local courts have the sole authority to determine whether a child is being educationally neglected. Currently, guidance and tools to make determinations of educational neglect are limited. Thus, determinations of educational neglect are made based on the discretion of workers with the Department for Community Based Services or of judges.
Chapter 1

Introduction And Overview

The last three decades have seen a steady increase nationally in the number of families who wish to educate their children at home, outside the formal structures of public or private, accredited education. Recent increases in the number of students being homeschooled in Kentucky reflect families’ social, religious, and academic priorities as well as concerns about school safety. Public school officials worry that the increased number of homeschooled children includes some whose families are falsely claiming to be homeschooling their children.

This report provides a summary of data available including current home school enrollment, recent trends, and outcome data for the minority of homeschooled children for whom they are available. It also describes the laws that apply to home schools in the commonwealth, a review of available outcome data for home school students, and a summary of concerns expressed by some home school parents in the commonwealth.
Major Conclusions

This report has several major conclusions.

- Children in Kentucky are homeschooled at rates that appear slightly higher than those estimated for the nation.\(^a\)
  Approximately 3.6 percent of Kentucky children ages 5 to 17 are homeschooled; this proportion is only slightly higher than the estimated 3.3 percent of students homeschooled in the nation.

- The percentage of students who are homeschooled varies widely among Kentucky districts, from less than 1 percent to a more than 10 percent.

- Most Kentucky school districts reported increases in home school enrollment between 2013 and 2017. Reasons suggested by directors of pupil personnel (DPPs) for the increase in homeschooling include concerns about students’ mental health or safety, as well as underage students who, after mandatory attendance was extended to 18 years, do not wish to continue their education. Home school advocates cite lack of trust in the information they or their children receive from public schools as a key motivation to homeschool.

- Data on the academic achievement of the entire homeschooling population are not available. The minority of home school students who enroll in Kentucky postsecondary institutions, including those who take dual-credit classes in high school, achieve, on average, at higher levels than their public school peers. Home school advocates cite prominent Kentuckians of many professions who are home school graduates. The very small percentage of home school students who transfer into K-12 public schools achieve, on average, similarly to their public school peers in reading and below them in math.

- Laws that apply to home schools vary widely among states, including Kentucky’s surrounding states, and are difficult to compare directly. Kentucky requires more of home schools than some states and less than others. For example, unlike home schools in some states with lower requirements, Kentucky home schools must report enrollment annually and must keep documents that are open to inspection by school districts. Unlike states with higher requirements, Kentucky does not require a high school diploma for home school instructors and does not require home schools to regularly submit evidence of teaching and learning.

---

\(^a\) Percentages reported for Kentucky are for 2017. National estimates are for 2016. It is possible that the estimated percentage for the nation would be higher in 2017.
• Home school advocates and parents interviewed for this study believe that the requirements of home schools in Kentucky are appropriate. They cite undue burdens placed by documentation requirements in some of Kentucky’s neighboring states. Rather than requiring more documentation of all home school parents, they recommend that existing laws be enforced for home schools that are not truly educating their students.

• Directors of pupil personnel are responsible for enforcing compulsory school attendance laws in the commonwealth. Only 38 percent of DPPs agree that they have the practical ability to enforce compulsory attendance laws for home schools, and many express frustration at their inability to effect changes in home schools that they suspect may be providing little or no education.

• DPPs express particular concern that some families transfer their public school children to home school with the primary motivation of avoiding legal consequences of public school truancy. Students who withdrew to home school in 2017 were more than 11 times as likely to be absent 20 percent or more of days at the time they withdrew than were students who did not withdraw to home school (30.2 percent versus 2.7 percent).

• Home schools can be held legally accountable under Kentucky laws that consider lack of adequate education to be a form of neglect. The Kentucky Cabinet for Health and Family Services (CHFS) and local courts can both address reports of educational neglect. Authority to enforce accountability for home schools to educate rests ultimately with the courts.

• As reported by DPPs, the likelihood that a homeschooling family that may be failing to educate a child will be held accountable varies substantially among school districts. Some DPPs report strong likelihood that actions taken by CHFS or local courts will ultimately effect changes in home schools that may not be educating, whereas others report high unlikelihood that any actions will effect changes in these schools.

• Reasons for the uneven implementation of laws that apply to home schools include case burdens on court and CHFS workers; lack of clarity in the specific measures according to which home schools can be determined to be meeting legal requirements; and time constraints of DPPs, whose primary duties lie with enforcing public school attendance laws.
Much of the data contained in the report is obtained from OEA’s 2018 survey of DPPs in all Kentucky public school districts. DPPs are the school district officials who are statutorily responsible for enforcing compulsory school attendance of school-aged children, including children who attend private and home schools, and for collecting private and home school enrollment data. OEA’s DPP survey requested home school enrollment data and DPPs’ reports on issues such as implementation of laws that apply to home schools and factors influencing trends in the number of homeschooled students. The survey was informed by interviews conducted with DPPs and superintendents in eight Kentucky districts that included districts from all geographic regions and various levels of student poverty as indicated by percentage of students eligible for federal free or reduced-price lunch (FRPL).

The report used data from the Kentucky Department of Education (KDE) student information system including enrollment (which reports transfer to and from home school), standardized test scores, demographic information, and attendance; KDE documents reporting school districts’ participation in federal programs; Kentucky Council on Postsecondary Education enrollment and GPA data; national literature; interviews with officials from Kentucky’s Administrative Office of the Courts (AOC) and CHFS; and interviews with representatives or parents from several home school groups. This report refers to school years by the year in which the school year ends. For example, the 2013-2014 school year is called school year 2014.

Limitations

Other than enrollment numbers, complete, representative data on Kentucky home school students are not available. Data such as academic outcomes are reported from samples of home school students—such as those who enroll in Kentucky public schools or in Kentucky postsecondary institutions—but must be interpreted with caution.

b Through web searches, OEA identified home school cooperatives or associations that appeared to vary in size and emphasis in academic, extracurricular, and religious orientation. OEA reached out to a representative sample of six groups, asking for interviews and recommendations for other contact groups. OEA interviewed representatives and parents from the groups that responded—Christian Home Educators of Kentucky, the Kentucky representatives of the national Home School Legal Defense Association, and TeenPact, an organization that provides leadership training for Christian home school students.
with caution as these samples of students are not necessarily representative of all home school students.

Although OEA was able to collect systematic data from public schools, OEA was not able to collect systematic data from home school families because of data access issues. For this reason, many of the issues addressed in the report—such as the implementation of Kentucky law related to home schools—are reported primarily from the perspective of public school officials and include only limited data from home school families. The interview data gathered from the small sample of home school parents in this study do not necessarily represent the views or experiences of all home school families.

Although OEA received responses from 171 out of 173 (99 percent) of all DPPs surveyed, response rates on individual questions varied. Unless otherwise noted, responses represent at least 90 percent of the state’s DPPs.

Organization Of The Report

The remainder of Chapter 1 reports reasons given for homeschooling children and models of home schools.

Chapter 2 describes the total numbers of Kentucky home school students by age, and as a percentage of total enrollment by district, in 2017. The chapter also reports trends in home school enrollment and academic achievement data available for small samples of homeschooled children.

Chapter 3 describes the laws governing home schools in Kentucky and compares them to those of other states, especially bordering states. The chapter also describes implementation of laws that apply to home schools, especially those that are intended to ensure that children are educated. The chapter summarizes concerns about those laws from home school parents interviewed for this study and from DPPs responding to OEA’s survey.

Home School—Overview

Although the education of children at home by their parents was common prior to the establishment of universal public education, it was relatively rare as recently as the 1990s, when national homeschooling rates were estimated at under 1 percent. Since that time, homeschooling has more than tripled in popularity, exceeding 3 percent in both Kentucky and the nation.
Families homeschool their children for a variety of reasons. Recent national research indicates that the most common reasons are, in descending order, dissatisfaction with the social environment of public schools (safety, drugs, negative peer pressure); dissatisfaction with the academic instruction in public schools; and a desire to provide religious or moral instruction.2

No comprehensive data exist on the reasons that Kentucky families choose to homeschool their children. This report provides reasons cited by the small sample of Kentucky home school parents and home school advocacy groups OEA was able to interview for this study and reasons reported by DPPs for public school students who transfer to home school.

Christian Home Educators of Kentucky (CHEK) informally surveyed parents about reasons for homeschooling, and the top three reasons, in descending order, were
1. Lack of trust in the information being provided to students and families; this includes but is not limited to information or views that are in conflict with religious beliefs. Many home school parents do not necessarily trust the data used to report on students or the content that is presented to them in the public school curriculum.
2. Safety concerns following school shootings.
3. Ability to customize academics for each child’s individual needs; this can include the pace of instruction, content relevant to the child’s interests, and meeting the needs of special education children or gifted children.3

Other benefits of homeschooling cited by parents interviewed for this study included moral and theological flexibility in instruction; learning opportunities that emphasize positive character traits; hands-on learning opportunities; exposure to a variety of people and opportunities; ability to teach in depth rather than “teach to the test”; and flexibility to pursue educational opportunities in a variety of formats. Homeschooling can also benefit a family’s lifestyle. Flexibility of instructional times can allow children to spend more time with parents who work odd hours, to focus on athletic or extracurricular activities, and to incorporate learning experiences into daily life and vacations.

Home school parents cite the combination of academic and social benefits of homeschooling as strong preparation for adult life. Parents report positive feedback from employers and colleges on
the performance of homeschooled children. Home school advocates provided OEA with examples of prominent citizens, in Kentucky and the nation, who are home school graduates.

Public School Students Who Transfer To Home School

OEA’s survey of Kentucky DPPs suggest that there is no single most common reason that families choose to homeschool their children. Appendix A provides data from DPPs on reasons parents transfer their children to home school. The reason most frequently cited by DPPs is associated not with a particular interest of the child, but with a desire to avoid negative consequences of truancy. Of the reasons that are associated particularly with the child’s well-being, social and emotional issues and physical safety are more likely to be factors than are concerns about education.

Home School Models

Data on the types of home schools operated in Kentucky are not available, but OEA’s interviews with home school parents, advocacy groups, and public school officials indicate a broad range. Home school models include those conducted entirely by families in their own homes, as well as those that combine home instruction with professional tutoring, with online education, and with part-time enrollment in unaccredited schools. Unaccredited schools vary in their particular emphasis, such as religious instruction, the arts, or classical texts. Professional tutoring or formal home school classes may be more common for students preparing for college and studying subjects, such as advanced math, that home school parents may not feel qualified to teach.

Many parents belong to networks or cooperatives that provide extracurricular activities such as sports, music, or field trips. These cooperatives also provide opportunities for social interaction among home school children. Although some networks are informal and as small as a few families, others are large enough to organize formal sports teams or large events, such as proms, for hundreds of students. By law, home school parents are responsible for determining their own particular curriculum and instructional materials. In some counties, however, public resources such as libraries are organized to assist home school parents.

In addition, home school children can participate in conventions, workshops, and seminars organized for a variety of purposes. For
example, OEA observed home school students participating in an intensive training, conducted at the state Capitol, in understanding the political process and how to advocate for religious and cultural values. This training, which included debates and legal workshops, was run entirely by home school students and former home school students.

**Concerns About Misuse Of Home School Laws**

Public school officials and representatives of home school groups who were interviewed for this study both noted that among the students who are reported as homeschooled are children from families that may not be operating a true home school. These families may be using home school laws to remove their children from public school without the intention of truly homeschooling.

Both public school officials and home school advocates expressed special concern about families falsely claiming to be homeschooling as a means of avoiding public school attendance for students who may have dropped out of school at age 16 if the legal age to drop out had not been increased to 18. Truant students and their families can face legal consequences, including fines, if the students do not attend school.

It is possible that transfer to home school may be suggested to some families as an option for older students who appear extremely unwilling to remain in school. Some home school advocates had opposed legislation increasing the dropout age to 18; they feared there would be an increase in the misuse of home school laws to avoid compulsory attendance laws as a consequence of the change in dropout age rather than an essential problem with the home school laws.

Of the reasons that were identified by DPPs as most common for parents to withdraw their children from public school to home school, seeking to avoid truancy charges was most frequently cited (by 20 percent of DPPs). Chapter 3 shows that DPPs’ estimates of children who are labeled as homeschooled but are not truly being educated vary widely among districts.

---

*Home school advocates and several DPPs provided anecdotal evidence that parents of truant children may be advised by public officials that homeschooling is an option for their children to avoid truancy charges.*
Chapter 2

Enrollment Trends And Achievement Data

At approximately 3.6 percent, the percentage of students who are homeschooled in Kentucky slightly exceeds the nation’s.\(^a\) Home school rates vary substantially among Kentucky districts, ranging from less than 1 percent to more than 10 percent of students.

Data on academic achievement are unavailable for most home school students. Available data indicate that home school students who enroll in college, either after high school graduation or as dual-credit students in high school perform, on average, at higher levels than their public school peers; however, home school students appear to enroll in college at much lower rates than their public school peers. Assessment data available for the small percentage of home school students who transfer to public schools show that they are proficient in reading at approximately the same rates as their public school peers but have lower math proficiency rates.

Caution should be used in assuming that any of the achievement data reported in the chapter are representative of home school students generally. Academic outcomes for the majority of the home school population are simply unknown in Kentucky and the nation.

Home School Enrollment

Home School Enrollment Data Collection

Like many other state education agencies, KDE does not publish annual data on home school enrollment. Kentucky home school enrollment data for this study are taken primarily from numbers reported by DPPs on OEA’s home school survey.\(^b\)

---

\(^a\) This figure is calculated based on all children ages 5-17 according to a US Census estimate.

\(^b\) Of 173 districts, 160 reported home school enrollment by age to OEA. Home school enrollment data for the remaining districts were submitted by total without reference to age—eight from follow-up emails by OEA and five from data submitted by districts for the same year to KDE.
Data on children who are reported by home schools as enrolled should, in theory, be easily reported because KRS 159.140 requires DPPs to keep a census of school-aged children residing in their districts, and home school parents are required to notify DPPs annually of home school enrollment.

Methods of recording home school data vary among districts, however, and the data may not be easily reportable by all districts. Interview data suggest that most districts are using Excel software to keep track of home school students, whereas others keep individual enrollment forms but may not compile the data received from individual home schools.

Kentucky districts are required to use the Kentucky Student Information System, Infinite Campus (IC), to record public school students’ information. IC also has the capability to record home school students’ information, but less than 10 percent of districts use it for that purpose. Only a handful of districts reported using IC to keep track of all home school students. Several DPPs indicated on OEA’s survey that they would like to use IC to record data about home school students and would like guidance from KDE on how to do that.

DPPs in many districts reported difficulty in keeping track of homeschooled students enrolled in their district because many home school families are highly mobile and mail sent to the last known address is often returned. As is reported later in this chapter, it is not uncommon for some home school families to switch back and forth frequently between home school and public schools.

IC has the capability, in theory, to enable DPPs to record and track homeschooled students as they move in and out of public schools or move around the state, but current law does not require parents to

---

c DPPs were asked to report home school enrollment, by age, in 2017. These data should in theory be easily available but were not reported by 13 of Kentucky’s 173 districts. School districts are required to report home school and private school enrollment annually to KDE to comply with federal requirements to allow these students to participate in certain federally funded programs. OEA compared data reported by districts to KDE on these federal forms with data provided to OEA and found discrepancies in the numbers reported to OEA and to KDE in all but six districts. In 138 districts discrepancies exceeded 10 percent. It is possible that these discrepancies are explained by the month of the year in which data were reported.

d These districts reported using the IC enrollment tab and entering homeschooled students as private school students. The remainder of districts that use IC keep track of only some home school students, such as those receiving special education services.
submit the level of information that would allow for creation of the unique identification number that is necessary for accurate tracking. For example, home schools are required to report the ages, but not the birthdays, of individual children.

**Percentage Homeschooled, Kentucky And Nation**

In 2017 more than 26,500 students were reported by DPPs as enrolled in Kentucky home schools. As shown by Table 2.1, these numbers make home school students approximately 3.6 percent of the estimated number of children ages 5 to 17 in Kentucky. This proportion is slightly higher than the 3.3 percent estimated for the nation in 2016.

Source: OEA 2018 Homeschool Survey; OEA staff analysis of data from the Kentucky Department of Education; United States. Census Bureau.

Demographic data of all Kentucky home school students are not available. Demographic data of public school students who transfer to home school show that they are more likely than are all public school students to be eligible for free or reduced-price lunch, less likely to be eligible for special education services, and less likely to be black or Hispanic. It is unclear whether the students who transfer from public school are representative of home school students generally.

---

\[ ^e \text{Compared to all public school students, those who withdraw to home school are more likely to be white (88 percent versus 78 percent), and less likely to be black (5 percent versus 11 percent), or Hispanic (3 percent versus 6 percent). Compared to all public school students, those who withdraw to home school are also more likely to be eligible for free or reduced-price lunch (75 percent versus 60 percent) and less likely to be students with an individualized education program who are eligible for special education services (12 percent versus 14 percent).} \]
Percentage Homeschooled By District

Figure 2.A shows variation, by Kentucky district, in the percentage of students who are homeschooled. Note that the method used to calculate percentages of students homeschooled by district excluded private school students. Under this method, the percentage of students homeschooled in the state was 3.8 percent.\textsuperscript{f}

Most districts fall within a few percentage points of the state average. Only 7 districts had less than 1 percent of students who were homeschooled, and only 10 districts had more than 7 percent of students who were homeschooled. Appendix B shows the numbers and percentages of children homeschooled by Kentucky district in 2017.

Figure 2.A

\textbf{Percentage Of Home School Students By School District}

\textbf{School Year 2017}

\begin{figure}
\centering
\includegraphics[width=\textwidth]{Figure2A.png}
\caption{Percentage Of Home School Students By School District School Year 2017}
\end{figure}

Note: Home school rates were calculated as a percentage of the total number of public and home school students in each district. When calculated this way, the state percentage of homeschooled students is 3.8 percent. Source: OEA 2018 Homeschool Survey; OEA staff analysis of data from the Kentucky Department of Education.

\textsuperscript{f} OEA’s calculation of district-specific percentages of homeschooled children did not include private school children, as data on the county of residence for private school children were not available. Percentages of children homeschooled, by district, are calculated as a percentage of the public and home school membership combined.

With the exception of northern Kentucky, districts with relatively higher percentages of homeschooled students are dispersed across the state.
Figure 2.B
Percentage Of Home School Students By School District
School Year 2017

Source: Staff calculation using data from OEA 2018 Homeschool Survey and the Kentucky Department of Education.
The homeschooling rates in Jefferson and Fayette Counties, which contain the state’s two largest cities, are 2.7 percent and 3.1 percent, respectively—lower than the state’s homeschooling rate of 3.8 percent. National data also show lower home school rates in urban areas.

**Homeschooling And District FRPL Rates.** There is little association between student poverty, as measured by the percentage of public school students eligible for federal free or reduced-price lunch, and the percentage of students who are homeschooled in a district. Districts with very high percentages of homeschooled students include both higher- and lower-poverty districts. Conversely, districts with very low percentages of homeschooled students include both higher- and lower-poverty districts.

**Lower Rates In Independent Districts.** Children are much less likely to be homeschooled in independent versus county districts. The average percentage of homeschooled students in independent districts is 2.3 percent versus 4.5 percent for county districts. Independent school districts are approximately one-third of Kentucky districts and enroll approximately 11 percent of the state’s public school students. Of the 20 districts with the highest percentage of homeschooled students, only one is an independent district. Of the 20 districts with the lowest percentage of homeschooled students, 18 are independent districts.

**Home School Enrollment By Age**

Figure 2.C shows the number of students, by age, who were reported as homeschooled in 2017 by DPPs on OEA’s survey. Between the ages of compulsory attendance (beginning at age 6 and ending at age 18), total home school enrollment climbs gradually with student age, growing from about 1,500 at age 6 to 2,350 at age 16. Enrollment climbs most steeply at ages 14 to 16.

---

8 The percentage of district students eligible for free or reduced-price lunch explains less than 0.1 percent of variance in the percentage of homeschooled students in Kentucky districts ($R^2 = 0.0003$).
Figure 2.C
Number Of Home School Students By Age
School Year 2017

Note: Numbers reflect what was reported by the 159 districts that reported home school enrollment by age.
Source: OEA 2018 Homeschool Survey.

Enrollment Trends

Historical data on the number and percentage of homeschooled children in Kentucky are not available. National data show substantial increases in the percentage of students homeschooled in the nation, from an estimated less than 1 percent homeschooled in the early 1990s to 1.7 percent in 1999, 3.4 percent in 2012, and 3.6 percent in 2016.\(^5\)

Of the 164 districts that reported enrollment data for both 2013 and 2017, approximately three quarters reported increases in home school enrollment. Survey data suggest an overall increase of about 40 percent in the total home school enrollment during that period.\(^h\)

Data on the number of public school students who transferred to home school, reported in the section that follows, show similar trends.

---

\(^5\) This estimate is based on data from the 115 out of 173 districts that provided total home school enrollment numbers for 2013 and 2017. While it is clear that home school enrollment has increased, the actual percentage of increase for all 173 districts could be higher or lower, depending on trends in the districts lacking 2013 data.
Transfer To Home School

The home school population includes students who have never been enrolled in Kentucky public schools as well as students who were previously enrolled in Kentucky public schools and transferred to home school.

In 2017 a total of 6,874 public school students transferred to home schools. This is an increase of 40 percent over the 4,922 who were reported as transferred to home school in 2012. During those same years, public school enrollment increased by less than 1 percent.

Figure 2.D shows the total number of students by grade range who transferred to home school in 2012 to 2017. The figure shows gradual and steady increases during these years in grades 1 to 5 and grades 6 to 8, and dramatic increases in grades 9 to 12 beginning in 2015. The increases in 2015 may be associated with changes that were to go into effect in the 2016 school year, when the overwhelming majority of Kentucky school districts (166 of 173) raised the legal dropout age from 16 to 18. It is possible that some students withdrew to home school in 2015 in anticipation of that change.

Figure 2.D
Students Transferring From Public School To Home School By Grade Range
School Years 2012 To 2017

Source: Staff analysis of data from the Kentucky Department of Education.
Appendix C shows the total number of Kentucky public school students who transferred to home school in 2012 and 2017, by grade range.

Many of the students who transfer to home school reenroll in public schools, often within 1 or 2 years of withdrawing. For example, of the 4,463 students who transferred to home school in grades 1 to 10 in 2012, 43 percent reenrolled in public school in 2013 and an additional 5 percent had reenrolled by 2014. Many students enroll in public school and transfer to home school more than once. Of the students who transferred to home school in 2012 and reenrolled in 2013, 15 percent transferred to home school again before 2017. Thus, many of the students shown as transfers to home school in Figure 2.D are counted in more than 1 school year.

Each year, districts report approximately five times as many students as transferring to home school as transferring from home school. Staff analysis, however, indicates that districts are significantly underreporting the number of students who transfer from home school. Of those who transferred to home school in 2016 and were located in the data in 2017, only 16 percent were correctly coded as transferred from home school.

Absence Rates Of Students Who Transferred To Home School

Students are considered chronically absent if they are absent 10 percent or more of enrolled days. Students who transferred to home school in 2017 were four times as likely to be chronically absent at the time they withdrew from public school (62 percent) as students who did not transfer to home school (14 percent).

Figure 2.E shows the percentage of students, by grade, who were chronically absent at the time they transferred to home school compared to chronic absence rates of students who did not transfer to home school. In addition to showing the much higher chronic absence rates of students who transferred to home school versus those who did not, the figure shows the much higher rate of chronic absenteeism among all students, but especially those who transfer to home school, in the middle and upper grades.
Figure 2.E
Chronic Absence Rates Of Students Who Transferred To Home School And All Others
School Year 2017

Note: Does not include students enrolled less than 50 days or students coded as moved. Chronic absence was calculated as 10 percent of school days enrolled.
Source: Staff analysis of data from the Kentucky Department of Education.

Almost one-third of the students who transferred to home school in 2017 had been absent 20 percent or more of their enrolled days in public school.

Figure 2.F shows absence rates of students who transferred to home school versus all other students by absence range. Almost one-third of the students who transferred to home school in 2017 had been absent 20 percent or more of enrolled days in public school. The students who transferred to home school were more than 11 times as likely to be absent 20 percent or more of days at the time they withdrew as students who did not withdraw to home school (30.2 percent versus 2.7 percent).

Figure 2.F
Percentage Of Students Who Transferred To Home School And All Others
By Absence Range, School Year 2017

Note: Does not include students enrolled less than 50 days or students coded as moved. Chronic absence was calculated as 10 percent of school days enrolled.
Source: Staff analysis of data from the Kentucky Department of Education.
Note that the cause of prolonged absence — reluctance to attend school generally versus reluctance to attend the public school in which a student is enrolled — cannot be determined from the data alone. DPPs noted an increasing number of students who withdraw from public school for reasons that might also explain prolonged absences from school prior to withdrawal. These include mood disorders (such as anxiety), negative peer relationships, bullying, or families’ safety concerns after media reports of school shootings.

Data reported in Appendix D suggest that students who transfer to home school are also likely to be, on average, lower performing on reading and math tests than their peers who do not transfer.

### Academic Achievement Of Home School Students

#### Lack Of Comprehensive Data

No comprehensive data exist on the achievement of home school students in Kentucky or the nation. This section reports postsecondary achievement for the minority of homeschooled students (less than 20 percent) who enroll in Kentucky postsecondary institutions (PSIs) following high school graduation and high school dual-credit data for the minority of home school students who take dual-credit classes while still in high school. Appendix E reports assessment data in grades 3 to 8 for the very small percentage of home school students (less than 2 percent) who transfer into public school from home school for whom valid, comparative Kentucky Performance Rating for Educational Progress data exist.

None of the achievement data presented in this report should be interpreted as representative of home school students generally. Achievement data are entirely lacking for those home school students who do not enroll in Kentucky PSIs or transfer to Kentucky public schools; these unmeasured students likely represent the majority of home school students.

---

1 To be included in the OEA’s analysis, students who were reported as transferred from home school were included only if they were not enrolled in Kentucky public schools for at least a year prior to their reenrollment. Many of the students who were reported as transferred from home school had been enrolled in Kentucky public schools during the previous year.
Home School Students Who Enroll In Public School Grades 3 To 8

Appendix E compares the 2017 reading and math performance in grades 3 to 8 of Kentucky public school students with students who transferred into public school from a Kentucky home school. Overall, the data show formerly homeschooled students performing fairly similarly to other students in reading and, on average, below their peers in math. The data should be interpreted with caution because they represent such a small percentage of the total number of homeschooled students.

High School Dual-Credit Enrollment And Grades

Dual-credit courses are college-level classes offered by Kentucky PSIs to high school students.

Dual-credit courses allow students to obtain high school course credits while also earning credits toward college graduation, prior to enrolling in college. Dual-credit courses can be offered online, at postsecondary institutions, or, if taught by specially qualified instructors, in Kentucky public high schools.

Table 2.2 shows the number of home school, Kentucky public school, and other (private or parochial school) students who enrolled in dual-credit classes in 2017 and the total number of classes they took in that year. The 400 home school dual-credit students were 1.6 percent of the total number of 25,432 students (public school, home school, and other) taking dual-credit classes. They were thus a smaller percentage of the population of students taking dual-credit classes than they were of the school-aged population as a whole (3.6 percent, as reported earlier). Home school students took an average of 3.6 dual-credit classes, compared to an average of 2.7 classes per public school student.

Home school students are more likely to take courses online than are public school students; 28 percent of all dual-credit home school students took classes online versus 19 percent of public school students.

Table 2.3 shows the percentage of public school, home school, and other students earning dual-credit GPAs, by GPA range, in 2017. Home school students enrolled in dual-credit classes obtained GPAs of 3.5 or above at much higher rates than did public school students or other students (73 percent of home school students versus 57 percent of public school students and 60 percent of other students) and obtained GPAs of 2.0 or below at half the rate of public school students (3 percent versus 6 percent).

### Postsecondary Education Outcomes

**Enrollment.** Table 2.4 shows the number of 2016 Kentucky high school graduates from public schools, home schools, and other schools who were enrolled in Kentucky PSIs during the 2017 academic year.

Home school students were 1.5 percent of Kentucky high school 2016 graduates enrolled in Kentucky PSIs in school year 2017 and were thus a lower percentage of the Kentucky PSI population than they were of the school-aged (5 to 17) population (3.6 percent). This suggests that Kentucky home school students may be enrolling in college at lower rates than their public school peers. Caution should be used in interpreting these data, however, because they are from Kentucky PSIs only and the proportion of public versus home school students who attend college out of state is not known.¹

¹ The total proportion of Kentucky home school graduates enrolled in college could be higher or lower than the 1.5 percent reported here for Kentucky PSIs. National college enrollment data are not available for 2016 graduates.

*Enrollment by institution may not sum to total enrollment; some students enrolled in multiple types of institution.

Source: Data provided to OEA by the Kentucky Council on Postsecondary Education.

The total number of 2016 Kentucky home school graduates is not known. Numbers reported earlier in Figure 2.C for students of high school age, however, suggest a graduating class of at least 2,000. At 355, home school enrollment in Kentucky PSIs in 2017 would be approximately 18 percent of the minimum of 2,000 students who should have been in the 2016 graduating class.

Kentucky 2016 home school graduates who attended Kentucky PSIs in 2017 were approximately equally likely to attend 4- versus 2-year PSIs (42 percent and 43 percent, respectively); their public school counterparts were much more likely to attend 4- versus 2-year PSIs (53 percent versus 33 percent, respectively). Thus, Kentucky home school students were relatively more likely than their public school counterparts to attend 2- versus 4-year public institutions. Home school students were nearly equally as likely to attend private Kentucky PSIs as were public school students (15 percent versus 14 percent).

College Readiness. Table 2.5 shows average ACT composite scores of Kentucky public school, home school, and other high school graduates who attended Kentucky PSIs in 2017. On average, ACT composite scores of Kentucky home school graduates were slightly higher than those of Kentucky public school graduates (23.9 versus 22.5).

Appendix F shows ACT data, by subject, of Kentucky public school, home school, and other high school 2016 graduates who attended Kentucky PSIs in 2017. These data show that Kentucky home school graduates enrolling in Kentucky PSIs are more likely to outscore their public school counterparts in reading and English than in math.

**College GPA.** Table 2.6 shows first-year GPAs of 2016 graduates from Kentucky home schools and Kentucky public schools who enrolled in Kentucky PSIs during the 2017 school year. Home school students have, on average, higher first-year college GPAs than their public school counterparts and students from other (private) schools. A greater percentage of home school versus public school graduates earned GPAs of 3.5 or above (61 percent versus 41 percent); conversely, a lower percentage of home school students versus public school students earned GPAs below 2.0 (8 percent versus 18 percent).

Chapter 3

Home School Laws, Kentucky And Nation

This chapter describes Kentucky laws that govern home schools and compares Kentucky’s laws with those in other states. The chapter also describes, in greater depth, the laws that require Kentucky children to be educated as well as practical and legal complications in the implementation of those laws as they relate to home schools.

State Comparisons

State laws that apply to home schools vary widely, not only in the requirements that apply to home schools but in the legal definition of these schools. Unlike Kentucky, which provides only one set of legal requirements for homeschooling, many states offer more than one legal homeschooling option.

The variety of options that exist in many states makes direct comparisons of home school laws difficult. For example, several of Kentucky’s neighboring states have one legal homeschooling option that has higher requirements than does the commonwealth’s sole option, but most of these states offer at least one legal home school option that has relatively lower requirements in some areas. The home school options with relatively lower requirements are often associated with exemptions based on religious beliefs.

State laws that apply to home schools vary widely, not only in the requirements that apply to home schools but in the legal definition of these schools. Unlike Kentucky, which provides only one set of legal requirements for homeschooling, many states offer more than one legal homeschooling option. The variety of options that exist in many states makes direct comparisons of home school laws difficult. For example, several of Kentucky’s neighboring states have one legal homeschooling option that has higher requirements than does the commonwealth’s sole option, but most of these states offer at least one legal home school option that has relatively lower requirements in some areas. The home school options with relatively lower requirements are often associated with exemptions based on religious beliefs.

For example, under Virginia’s statute on requirements for home instruction, sec. 22.1-254.1, parents are required to demonstrate qualifications as instructors, to submit a curriculum description, and to submit evidence of student learning such as standardized test scores, licensed educator evaluation, or community college transcript. Under the religious exemption in the compulsory attendance statute, sec. 221-254, a parent who “by reason of bona fide religious training or belief is conscientiously opposed to attendance at school” can homeschool a child and is not subject to any of the requirements described in the home instruction statute. In Tennessee, different laws apply to students who are enrolled in online education schools versus those who are educated by parents in the home. In Kentucky, both would be considered homeschooled.
Many states have lower requirements for home schools than does Kentucky.

Table 3.1 summarizes requirements that apply to home schools in Kentucky compared to other states. The table shows that many states have lower requirements for home schools than does Kentucky. Unlike some other states, Kentucky requires home schools to notify school districts that they are homeschooling children, teach specific subjects; and to meet attendance requirements.

**Table 3.1**

</tbody>
</table>

Note: Kentucky provides only one set of legal requirements by which to homeschool. In some other states, two or more options exist, and requirements vary widely among those options. Many of the states that have a particular requirement under one option may not have it under all options.

*In states with more than one option, designation is based on the primary home school option.

**Six states require notification only when homeschooling commences; Kentucky home schools are required to provide notification annually.

***The impact of these requirements on home schools varies greatly among states. In Kentucky, home schools are required to have records available on request. In others, such as New York, home schools must submit annual home instruction plans and quarterly progress reports to local superintendents.

The table also shows two areas in which a number of states have higher requirements:

- Although there is no minimum level of education required for the operator of a home school in Kentucky, 14 states require a high school diploma or above.

- Kentucky home schools are not required to submit any evidence of teaching or learning, whereas 20 states require that home schools submit evidence such as standardized test scores, student portfolios, or assessments by qualified professionals.

Public School Participation

According to OEA’s 2018 survey of DPPs in all Kentucky school districts, 141 out of 173 districts do not permit home school students to participate in district activities. Of those that reported allowing participation, the majority cited participation in federally funded special education activities. By federal law, home schools are permitted to participate in district activities funded through the Individuals With Disabilities Education Act or Title II teacher quality grants. Staff analysis of documents submitted to KDE indicate that less than 1 percent of home schools participate in these programs.

Bordering States

Among Kentucky’s bordering states, Kentucky has higher home school requirements than do Illinois, Indiana, and Missouri. For example, Kentucky home schools are required to report enrollment annually to their local school districts, but home schools in Illinois, Indiana, and Missouri are not. Although each of these states shares some of Kentucky’s requirements—such as minimum attendance days or hours (Indiana, Missouri) and required subjects of instruction (Illinois, Missouri)—the ability of home schools in these states to operate without annual contact presumably reduces the likelihood of any monitoring or accountability.

Kentucky has lower home school requirements than do Ohio, Tennessee, Virginia, and West Virginia, based on those states’ primary home school options. For example, there is no minimum level of education required for the operator of a home school in Kentucky, but each of these bordering states requires home school instructors to have at least a high school diploma under some home

---

b DPPs reporting that the district does not permit participation would have been referring to activities other than federally funded activities. All school districts must permit participation in certain federal programs, but very few home schools take advantage of that opportunity.
school options. Although home schools in Kentucky are not required to provide any evidence of teaching or learning, at least one option in each of these four bordering states does. In Ohio, for example, home schools must annually provide a standardized test score, a written narrative by a qualified professional, or an approved alternative assessment. In West Virginia, home schools must either assess students annually and submit assessment results to school districts in the 3rd, 5th, 8th, and 11th grades or seek approval to homeschool from the local school board and provide evidence of instruction and progress, on request. In Tennessee and Virginia, one of the homeschooling options also requires standardized testing.

As noted earlier, direct comparison of home school laws is complicated by the fact that many states offer more than one legal option to homeschool. Of Kentucky’s bordering states, Ohio and West Virginia are the only ones that clearly have higher requirements than does Kentucky in each of the legal options to homeschool.

The degree to which states or local school districts enforce requirements for testing or other evidence of learning is not known, and compliance cannot be assumed. For example, a 2012 report by the Tennessee Office of Research and Education Accountability noted that, despite the requirement that standardized test scores for home school students be submitted to the state board of education, these scores are not regularly received.6

Religious Or Conscientious Objections

With the exception of West Virginia, all of the bordering states with more rigorous requirements also have at least one homeschooling option based on religious conviction, with fewer requirements than each state’s primary home school option.
Legal Status Of Home School High School Diplomas

The Kentucky Department of Education does not issue diplomas to students of unaccredited schools, including home schools and does not officially recognize any diplomas that such schools may issue. Although it is in theory possible for a home school to become accredited, it is unlikely that a school could meet the requirements of accrediting agencies. Currently no home schools have met standards for private school accreditation.

Because KDE does not recognize diplomas from home schools, such diplomas will not necessarily qualify a home school high school graduate to meet entrance qualifications for Kentucky postsecondary institutions or for a job that requires a high school diploma. Home school graduates seeking to meet legal requirements for high school graduation may have to pass the GED test. GED classes are offered free of charge in all Kentucky counties. State funding to cover the costs of taking the GED test is sometimes but not always available. Home school graduates seeking entry to Kentucky postsecondary institutions may have to demonstrate their readiness through the ACT or other college readiness tests.

Home school parents interviewed for this study expressed frustration at the need for home school graduates to earn additional credentials and for parents to incur additional expenses from the process of earning these credentials. They expressed a desire for easier communication with local school districts in registering for the ACT.

Home School Diploma Laws In Bordering States. Of Kentucky’s bordering states, Missouri, Ohio, Tennessee, and West Virginia have enacted legislation securing the equal treatment of home school high school diplomas in specified situations. West Virginia law prohibits any state agency or institute of higher learning from treating home school high school diplomas differently from others. In Tennessee, home school high school diplomas must be treated the same as public school diplomas by all agencies, departments, and other entities of state and local government. Ohio law states that home school diplomas satisfy all requirements for legal proof of high school completion, including for employment. In Missouri, home school diplomas must be treated equally with other high school diplomas in employment for...
By law, Kentucky families must ensure that children between the ages of 6 and 18 are enrolled in public school unless they attend a private, parochial, or church school or are otherwise exempt. Although not addressed specifically in law, home schools are considered by KDE to be nonaccredited private schools.

As private schools, Kentucky home schools are subject to requirements that include notification of enrollment; keeping of attendance and scholarship reports; and instruction in a variety of subjects.

DPPs have the duty to enforce compulsory attendance laws for all school-aged children residing within their districts; they have the authority to monitor some but not all of the requirements that determine whether a home school meets criteria to exempt a child from compulsory attendance.

Requirements For Kentucky Home Schools

Exemption From Compulsory Public School Attendance

By law, Kentucky families must ensure that children between the ages of 6 and 18 are enrolled in public school unless they have graduated from an accredited school; are prevented by a physical or mental condition; or are enrolled in a private, parochial, or church school (KRS 159.010 and 159.030). KDE considers home schools to be nonaccredited private schools, although statute does not specifically address granting them that designation.

Legal Requirements

As private schools, Kentucky home schools are subject to the requirements described in Table 3.2. These include annual notification of enrollment for each homeschooled child and keeping of attendance and scholarship reports. In addition, home school instruction must be in English, for a term at least as long as that of the public schools, and in required subjects. The required subjects are not defined in statute but have been interpreted in case law to be reading, mathematics, history, civics, writing, spelling, and grammar.8

DPPs have the duty to enforce compulsory attendance laws for all school-aged children residing within their district; they have the authority to monitor some but not all of the requirements that determine whether a home school meets criteria to exempt a child from compulsory attendance. As shown by Table 3.2, DPPs have direct authority to monitor reporting of home school enrollment and keeping of required documents but lack authority to monitor whether home schools are teaching required subjects or instructing students for the required minimum term.

Source: Staff analysis of Kentucky statutes.

Other than annual, written notification of student enrollment information, homeschooling families are not required to provide any additional information in order to operate a home school. There are no minimum educational qualifications for home school instructors, nor are homeschooling families required to provide evidence of the curriculum or materials that will be used for instruction.

Parental Awareness Of Home School Requirements

Most school district policies require that home school parents be offered a KDE guidance document explaining legal requirements for home schools. KDE also posts this guidance on its website. School districts have no authority to ensure that parents read or understand this guidance, however, and DPPs note that parents are often unaware of at least some aspects of the law. At least three-quarters of DPPs report that they sometimes or often encounter home school parents who do not understand aspects of the laws governing home schools including the requirements that the home school teach a variety of subjects, that a home school diploma may not have the same legal status as a diploma from an accredited institution, and that home school families who move school districts during the academic year must report enrollment to the DPP of their new district. Nearly half of DPPs (48 percent)
In some cases, parents’ decisions to homeschool may be affected by their unfamiliarity with the law.

Many DPPs have strong concerns about what they view as lack of accountability for home schools under Kentucky law.

Differing Views Of Home School Requirements

As is described in the section that follows, many DPPs have strong concerns about what they view as lack of accountability for home schools under Kentucky law. At the same time, many DPPs expressed caution about introducing reporting requirements in the absence of additional district personnel to monitor those requirements.

Home school parents and advocates interviewed for this study noted that legal mechanisms already exist to establish the accountability of home school families that are failing to educate their children. They also voiced strong opposition to the universal and routine reporting requirements that exist in some other states. Parents noted the burden that these reporting requirements place on home school families who are already, at their own expense, educating their children without state support. Further, the structure of the reporting requirements, whether they be tests or curriculum documents, may force parents to make instructional decisions that they would not otherwise feel are best for their children.

Home school parents interviewed for this study noted that the requirements that apply to public schools may not always be suitable for home schools and that this is already the case with the requirement to ensure and report attendance in the same manner as public schools. Parents explained that, because home school instruction occurs in small groups, home school instructors are able to provide more instruction in fewer hours. Further, instruction in home schools occurs in formal settings and is also informally integrated into many activities throughout the day. Even family vacations, for example, may be organized around historical sites or other learning opportunities. Thus, parents who are meeting the
requirements for instructional hours may have difficulty fully documenting their compliance.

### Accountability For Kentucky Home Schools

Although the Constitution of Kentucky does not address homeschooling in particular, it does, under Section 5, “Right Of Religious Freedom," guarantee that no man shall “be compelled to send his child to any school to which he may be conscientiously opposed.” At the same time, parents are required by law to send children between the ages of 6 to 18 to school, and the law guarantees children a fundamental right to educational instruction. In Kentucky, as in many other states, the laws that apply to home schools exist in a complex environment caused by tension between parents’ rights to freedom of religion or conscience in determining the education that is appropriate for their children and government officials’ obligation to enforce compulsory attendance laws.

The responsibility for implementation of laws that require children to be educated in the commonwealth, as those laws apply to home schools, is divided among DPPs, CHFS, local courts, and private individuals who are concerned that a child is not being educated. DPPs have the duty to enforce compulsory attendance laws, investigate cases of nonattendance, and take legal action, with the support of the superintendent, as necessary (KRS 159.130 and 159.140). Appendix G summarizes laws relevant to accountability for or monitoring of home schools.

This section reports great variation in DPPs’ perceptions of the clarity of the laws that apply to enforcement of compulsory attendance laws for home schools and in their confidence that change can be effected in home schools that may be providing little or no instruction.

The analysis presented in this section is based entirely on data shared by school district officials. As noted earlier, home school parents interviewed for this report voiced the strong opinion that current Kentucky law allows for accountability for those homeschooling families who are not educating their children.
DPP Estimates Of Home Schools
That May Not Be Educating

None of the DPPs interviewed for this study or responding to the survey expressed concerns about the quality or nature of education provided by parents or guardians who homeschool because they are committed to providing a particular educational experience for their children. Many expressed admiration for the types of educational experiences they have seen provided by some home school families. Most DPPs expressed concern, however, that the flexibility afforded by home school laws is being abused by some families seeking to evade accountability for educating a child.

DPPs do not have any way of directly monitoring the instruction that home schools provide, but many have strong concerns that some families who enroll their children in home schools are not providing even a basic level of education. These concerns are often based on experiences that DPPs have had with families of children who were previously enrolled in public schools. During home visits that DPPs are required to make for families of children who are truant in public schools, DPPs report conditions such as lack of parental education or lack of books, computers, or any other instructional materials in the home. One superintendent reported that a parent who was homeless and living in a vehicle withdrew her child to be homeschooled. DPPs’ concerns about home school families can also be based on documents submitted by home school families who appear to have difficulty with basic written communication.

OEA’s 2018 Homeschool Survey asked DPPs to estimate the number of home schools that, based on available evidence, they believed were providing little or no education. Of the approximately 75 percent of DPPs that responded to this question, estimates ranged widely. Twenty DPPs (15 percent of the 132 who responded) reported that they did not have strong concerns about any of the homeschooled children in their districts, whereas nine DPPs (7 percent of respondents) reported strong concerns about 50 percent or more of the homeschooled children in their districts. The average percentage of homeschooled students who, according to estimates by DPPs who responded to this question, were receiving “little or no education” was 13 percent.\(^d\) As noted earlier in this study, it is likely that the impressions DPPs form of

\(^d\) For purposes of calculating this average, OEA capped the percentage of home schools that could be identified as concerning at 50 percent. This was done to guard against the effect of outliers in districts with relatively few home school students.
homeschooled children—especially DPPs in larger districts—are based more on those families with whom they have had contact in the public schools than on those families who have never enrolled in their children in public schools.

**Potential Misuse Of Home School Laws To Avoid Consequences Of Public School Truancy**

Of special concern to many DPPs are the number of families that they believe are misusing home school laws to evade negative consequences associated with public school truancy. Students can be referred to the courts when they are habitually truant, meaning they have unexcused absences for 6 or more school days (combined total of full or partial days absent) and are considered in violation of compulsory attendance laws. Courts can impose a variety of punishments that include fines, probation, requirement to attend a particular school, and loss of driving privileges. Court designated workers (CDWs) are responsible for processing juvenile complaints, such as truancy, for individuals younger than 18. They may elect to recommend a juvenile for a diversion program that gives the juvenile a chance to resolve the complaint, or refer him or her to the court.

Forty-six percent of DPPs reported that they often observe families that withdraw their children from public school to be homeschooled because they are trying to avoid consequences of truancy; an additional 36 percent report that they sometimes observe this. DPPs report an uptick, for example, in parental requests to transfer students to home school in the week after the district has sent truancy notices to students’ homes. DPPs are concerned that truancy often represents a lack of commitment to education by a child or parent. (Truancy may also indicate other issues, such as social anxiety or fear of bullying, that would eventually lead parents to homeschool their child.)

A family or child who is facing legal consequences as a result of public school truancy may not be directly accountable for any school attendance once the child has transferred to home school as long as they meet the requirements of home school laws.

---

*Following Senate Bill 200 of 2014, CDWs must also refer juveniles to a Family Accountability, Intervention, and Response (FAIR) team before referring them to court. FAIR teams are collaborative, multidisciplinary teams that include CDWs, CHFS representatives, DPPs or other public school representatives, law enforcement, and others. FAIR teams take a case management approach to resolving truancy.*
for punitive measures from either the school, district, or local court system. I believe that we are allowing too many students to go without learning and instruction and we are setting them up for failure in our society.”

It is possible that the alleged misuse of home school laws to avoid public school truancy is associated with the increase, beginning in 2015, in the number of public school students in grades 9 to 12 who transferred to home school. Several DPPs and superintendents noted that the increase in the minimum dropout age from 16 to 18 put pressure on schools to accommodate students who were no longer interested in attending school and would have dropped out had the dropout age not been raised to 18. A superintendent interviewed for this study noted that higher-resource districts or those with highly developed career and technical options were in much better positions to accommodate the needs and interests of students who might have formerly dropped out than were lower-resource schools that could not provide many educational options.

DPPs indicated that parents or guardians who attempt to withdraw a child to home school after it has become clear that they will face legal consequences as a result of truancy are unlikely to keep their child enrolled in public school, regardless of actions taken by school staff, the CHFS, CDWs, or judges. The majority of DPPs reported that less than one-quarter of parents intending to withdraw a child to home school will reconsider, and nearly one-quarter (23 percent) reported that no or almost no parents reconsider. DPPs were much more likely to report that judges were “often” an influence on the decisions of family or guardians to keep their child enrolled in public school (57 percent) than that CDWs (31 percent), cabinet workers (31 percent), or DPPs (28 percent) were. DPPs reported great variation among local judges in their willingness to hear cases of public school truants who have transferred to home school. Some judges require a family to keep established court dates and face the public school truancy charges. Others judges are unlikely to hear these cases.

**Role Of DPP In Enforcing Compulsory Attendance Laws**

**DPP Confidence In Power To Enforce Attendance Laws**

On OEA’s 2018 Homeschool Survey, nearly half (49 percent) of DPPs disagreed that “DPPs have the ability, in practice, to ensure that homeschooling families are complying with compulsory attendance laws.” Of those, approximately half (25 percent of all
DPPs) strongly disagreed. Just over one-third (36 percent) of DPPs agreed that they have the practical ability to enforce compulsory attendance laws for home school students; of those DPPs, a minority (8 percent of all DPPs) strongly agreed.

DPPs’ comments suggest two aspects of Kentucky law that present challenges in carrying out DPPs’ duties to enforce compulsory attendance laws for homeschooled children:

- The law does not provide clear guidance in the process that DPPs should follow to determine whether home school students are being educated or to address concerns about home schools.
- DPPs do not ultimately have authority to enforce any consequences on home schools that do not appear to be educating their children. Authority to do this lies with CHFS or, ultimately, the local courts. The involvement of CHFS or local courts in addressing concerns about home schools varies.

The section that follows describes the primary mechanism—request of attendance and scholarship reports—by which DPPs have the authority to determine whether a home school appears to be educating, along with wide variation among DPPs in the degree to which that mechanism appears to support enforcement of compulsory attendance laws.

**Attendance And Scholarship Reports**

Under KRS 159.040, DPPs have the authority to inspect the attendance and scholarship reports required of all home schools (which are considered private schools):

> Attendance at private and parochial schools shall be kept by the authorities of such schools in a register provided by the Kentucky Board of Education, and such school authorities shall make attendance and scholarship reports in the same manner as is required by law or by regulation of the Kentucky Board of Education of public school officials. Such schools shall at all times be open to inspection by directors of pupil personnel and officials of the Department of Education.

\(^f\) The remainder of DPPs did not agree or disagree.
Lacking in statute or regulation is any additional practical guidance about the way attendance and scholarship reports for home schools should be kept.\(^g\)

KRS 159.160 gives local superintendents the authority to require additional facts. It might be possible, therefore, for a local board to require additional attendance facts of public schools and, by extension, home schools.

Though statutorily permitted to do so, KDE does not play a role in inspecting home schools. The Kentucky Board of Education has not proposed regulations guiding the manner in which scholarship reports should be kept and does not provide an attendance register for home schools.

**Finding 3.1**

KRS 159.040 authorizes the Kentucky Board of Education to play a role in establishing criteria required for attendance and scholarship reports that apply to all schools. The board has not proposed regulations for the keeping of scholarship reports.

**Finding 3.2**

KRS 159.040 requires home schools to keep attendance in a register provided by the Kentucky Board of Education. The board does not provide home schools with an attendance register.

**Finding 3.3**

KRS 159.040 allows the Kentucky Department of Education to play a role in inspecting attendance and scholarship reports. KDE does not currently play such a role.

**Practices In Requesting Attendance And Scholarship Reports**

Kentucky law stipulates that attendance and scholarship reports be available upon request but does not provide any guidance about

\(^g\) KRS 161.200 does elaborate on requirements for attendance reports, but its application in a home school setting seems unclear: “Each teacher in the public schools shall keep an approved record which shall be left with the superintendent or as he directs at the close of the term. The record shall show the program of recitations, classification, attendance, and grading of all pupils who attended school at any time during the school year, and such other facts as are required.”
when or how DPPs should request and inspect these reports. On OEA’s 2018 survey, most DPPs reported that attendance and scholarship reports are requested only if there is a concern about a particular home school (63 percent gave such a report for attendance reports; 52 percent did so for scholarship reports). A small minority of DPPs reported requesting documents from all or most home schools on a regular basis (8 percent for attendance reports and 7 percent for scholarship reports). Approximately one-quarter of DPPs (24 percent) reported that the district does not request attendance reports; approximately one-third (34 percent) reported that the district does not request scholarship reports.

Clarity About Roles Related To Attendance And Scholarship Reports

DPPs were asked how clear they felt the role of the DPP is in relation to their authority to request, review, and follow up on attendance and scholarship reports for home school families. Survey data reported in Figure 3.A show substantial variation in DPPs’ understanding of these roles. Although most reported clarity in their authority to request reports—especially attendance reports—fewer reported clarity in the criteria that should be used in reviewing the reports and in the actions that should be taken following review.

Figure 3.A
DPP Perceptions Of Clarity In Roles Related To Attendance And Scholarship Reports

Source: OEA 2018 Homeschool Survey.
Except for the authority to review attendance reports, less than half of DPPs felt that their role is “totally clear.” DPPs expressed less certainty about their role in reviewing scholarship reports versus attendance reports. More than half of DPPs reported that the criteria with which they should review scholarship reports and actions they should take following review of these reports were somewhat or totally unclear.

**When To Request Documents.** Many DPPs voiced confusion about when it is appropriate to request documents from home schools. It is most common for DPPs to request these documents in response to a specific concern. A concern may arise because a home school has failed to report its enrollment, because of a perception the DPP forms of the school, or because of concerns reported by individual citizens. Mandatory reporting laws described in Appendix G require that if a citizen is concerned that a child is being neglected (including a child who does not have access to educational instruction), the citizen must report these concerns. DPPs interviewed for this study noted limitations in mandatory reporting laws as a means of reliably identifying home schools of concern. Children in some home schools may have limited contact with individuals outside their families. Further, DPPs noted that information submitted by mandatory reporters is not always reliable. It is not uncommon, for example, for these reports to be filed by individuals with a personal grievance against a home school family.

**How To Review Documents.** The nature and quality of scholarship reports vary widely. For example, a DPP in one large district described with admiration the huge portfolios of work and activities presented by some home school families when enrolling their homeschooled children in public schools and contrasted these portfolios with the scraps of paper showing only final grades that other families submitted. As noted by one DPP on OEA’s survey, there appears to be no minimum standard by which attendance or scholarship reports could be judged as inadequate:

> I believe home school laws in Kentucky make it impossible for a DPP to ensure that the student is getting a real education. Anyone can present a school calendar if given an advanced notice. And, since we are not really allowed to assess the quality of the curriculum, a few printouts of sample lesson plans meets required documentation.

**Actions To Take Following Review Of Reports.** Although KRS 159.130 requires DPPs to investigate cases of nonattendance, there is no statute specifically guiding the action of a DPP who,
based on review of attendance or scholarship reports, suspects that a child is not being educated. Also, because home schools operate in families’ private homes, DPPs do not have authority to observe or inspect the schools.

**Conflicting Sources Of Information.** DPPs get conflicting information from different sources about when, whether, and how to request attendance and scholarship reports. Although it may appear that they have a legal duty to monitor and review documents, the quotes below from OEA’s survey show that DPPs get conflicting information from judges, KDE staff, and representatives of home school associations:

- “DPPs have been directed and informed that we are only allowed to monitor attendance records. Scholastic reports, grades, and other areas are outside of our authority.”
- “We have no authority unless the courts allow it. I have been told I cannot request them by the courts and social services.”
- “There have been mixed messages from advocacy groups and various lawsuits regarding home school.”

In comments submitted on the OEA survey, many DPPs indicated a need for greater clarity regarding DPPs’ roles in enforcing compulsory attendance in home schools. Here, for example, are some statements submitted by DPPs:

- “Because it is so difficult to monitor homeschooled students, it would be helpful if there were very specific guidelines to be followed across the state to ensure consistency.”
- “Clear communication and understanding of the statutes and regulations governing homeschooling in Kentucky along with any improvements to existing laws would be of tremendous value to public school districts and would also be useful to parents and guardians who are considering or currently participating in homeschooling.”

**“Best Practices Document”**

In 1997, a “Best Practices Document” was developed by a task force that included representatives from Christian Home Educators of Kentucky, the Kentucky Home Education Association, DPPs from four Kentucky districts, and a KDE representative. A “Best Practices Document” was developed by a task force that included representatives from Christian Home Educators of Kentucky, the Kentucky Home Education Association, DPPs from four Kentucky districts, and a KDE representative. The document was updated by a similar group in 2000. In 2016, CHEK adjusted the document to reflect new requirements for compulsory attendance and minimum school terms. The document was developed to provide to home school families and DPPs some guidance, clarity, and common understanding of home school laws.
The “Best Practices Document” outlines the laws that apply to home school, informing home school parents of their responsibilities under the law and the power of the DPP to request required documents. In some cases, the “Best Practices Document” interprets the law. For example, KRS 159.040 requires the making of attendance and scholarship reports “in the same manner” in which public schools make them. The document interprets this phrase to mean that these reports should be kept at the same interval that public schools use and notes that the law does not specify the format. It offers, as possibilities, “a traditional report card, a portfolio of exemplary work, a narrative assessment or any one of many” other forms.

In relation to scholarship and attendance reports, the document also suggests that it is the role of the DPP to ask for evidence that a child is actually being schooled in cases when a question arises. The document does not state specifically that DPPs do not have the authority to request documents in the absence of a question about a particular home school, but DPPs have interpreted the document as making that claim. In interviews and on the OEA survey, several DPPs reported that, following routine requests for documents from home schools, they had been contacted by the Home School Legal Defense Association and informed that their action was a violation of the “Best Practices Document.” Many DPPs are not aware of the document. Others are aware of it but unsure of whether it offers legal guidance or whether it offers informal guidance. Thus, many DPPs are unclear about what is required by law versus what is suggested by this document.

As is explained in the section that follows, accountability for home schools that may not be educating their pupils often requires coordinated action by DPPs, CHFS, and the courts; DPPs alone do not have the legal authority to enforce compulsory attendance laws. The “Best Practices Document” does not address the role of CHFS or the courts.

Finding 3.4

The “Best Practices Document” developed in 1997 and updated since then attempts to provide clarity to homeschooling families and DPPs. The document was developed by a task force that included members of statewide home school...
organizations, DPPs, and a representative of the Kentucky Department of Education. Many DPPs either are not aware of this document or are confused about whether it represents law or whether it represents suggested practices.

DPPs May Lack Time To Monitor Home Schools

Many of the DPPs expressing strong concerns about lack of education in some home schools also noted limits in the time available to DPPs to take on duties beyond what they feel is their primary duty to enforce compulsory attendance laws for public schools. Appendix H contains KRS 159.140, which describes the duties of DPPs, and KRS 159.130, which describes DPPs’ powers.

In addition, many DPPs have duties beyond their roles as DPPs. As one DPP explained, most do not have time available to follow up consistently with concerns about home schools: “DPPs usually fill other administrative roles within districts which limits the time they have available. For example, I am the transportation director, bus driver trainer, maintenance supervisor, safe schools coordinator as well as the DPP. I usually drive a bus every day to have routes covered.” Such statements suggest that, even with greater clarity in home school laws, DPPs might have difficulty carrying out their duties for enforcing compulsory attendance laws for home schools at current DPP staffing levels.

Educational Neglect

Children in the commonwealth have a fundamental right to education (KRS 620.010). KRS 600.020 includes in the definition of “abused or neglected child” a child who is not receiving an adequate education. KRS 620.030 requires any person who has reasonable cause to believe that a child is neglected to report it to law enforcement, the cabinet, the commonwealth’s attorney, or the county attorney.

Although DPPs have the duty to enforce compulsory attendance laws, they have no specific authority to require actions of home schools. A DPP who is concerned about the level of education being provided in a home school, and who has been unsuccessful in addressing that concern with the home school, can initiate legal action by an allegation of educational neglect in the interest of the child.
As described in this section, educational neglect can be reported to CHFS, to law enforcement, to the commonwealth’s attorney, to the county attorney, or to the local courts. Because the courts enforce actions in the interest of children found to be educationally neglected, they provide a level of accountability for home schools.

**Role Of CHFS**

When neglect is reported, CHFS must decide, based on its determination of the level of risk and evidence, whether to investigate the claim. CHFS is not required to take action on any particular claim and must decide which claims are most urgent and are the best use of available personnel. If a claim of educational neglect is investigated, it will be referred to the Department for Community Based Services (DCBS) within CHFS.

Many DPPs reported that CHFS is unlikely to investigate a claim of educational neglect unless other forms of abuse or neglect are suspected. Heavy DCBS caseloads may make the cabinet reluctant to pursue cases perceived to be less serious than physical neglect and abuse. As explained by one DPP, “It is not clear what recourses are available if the DPP feels there is evidence a homeschooled child is not being educated properly. The most typical answer to this issue is to report it to social services. Social services is burdened by an endless list of severe problems. Academic neglect does not often draw their attention.”

Should a DCBS worker investigate a claim of educational neglect, individual discretion would be required to determine that the claim is substantiated. The regulation that specifies criteria to be used by DCBS in investigation of a claim of abuse or neglect, 922 KAR 1:330, states only that educational neglect is occurring when a “[c]aretaker’s neglect prevents the child from attending school or receiving appropriate education.” No other tools or guidance are specified in determining whether a child is educationally neglected.

If a report of educational neglect is assigned to a DCBS worker who upon investigation substantiates the claim, that worker can, as part of a case management plan, require the family to improve the education being provided in the home or to enroll the child in an accredited school. If the home school family does not satisfy the conditions of this plan, the DCBS worker can file a petition with the court claiming that the child is being neglected. State officials with the Administrative Office of the Courts explained that it is
very unusual for DCBS to file a claim of educational neglect, absent other forms of neglect or abuse.

**Role Of Local Courts**

As permitted by KRS 620.070, any individual can directly petition the local court with a concern about neglect. Reporting the claim first to CHFS is not required, but a county attorney may be more likely to pursue a case in which DCBS has substantiated a claim before a petition is filed with the court.

Like CHFS, county attorneys have discretion about whether to pursue a case related to educational neglect of a homeschooled child, regardless of which entity or person files the claim. DPPs interviewed for this study, as well as those responding to the OEA survey, noted great variation in the degree to which local judges will agree to hear a case of educational neglect of a homeschooled child. One DPP reported that his local judge is unlikely to accept any cases of educational neglect without other allegations. Another DPP reported variation between two local judges, with one willing to take on educational neglect cases and the other unwilling to do so.

Interviews with AOC officials suggest that staffing challenges as well as lack of clarity in the law may play a role in local courts’ willingness to take on cases of educational neglect of homeschooled children. Court dockets are often filled with cases that appear more urgent than educational neglect as a stand-alone concern. Further, as with DCBS, court personnel (CDWs, county attorneys, and judges) working on cases of educational neglect for homeschooled children lack the specific guidance that might support them in determining whether a child is educationally neglected.

**Finding 3.5**

By law, the Cabinet for Health and Family Services and local courts have the sole authority to determine whether a child is being educationally neglected. Currently, guidance and tools to make determinations of educational neglect are limited. Thus, determinations of educational neglect are made based on the discretion of workers with the Department for Community Based Services or of judges.
If a judge finds that a child is being educationally neglected, the judge can require action. As explained by the AOC,

If a judge determines that a child is being educationally neglected, the judge may require that the family take specific actions to avoid penalty, including enrolling the child in public school.

When a matter is before the court on a petition or complaint, the courts do have broad authority to issue orders required to protect the child and/or serve the child’s best interest. In cases in which a child’s educational well-being is at risk, such as educational neglect and truancy cases, the court may order that a custodian ensure that the child attend public school if attendance would mitigate educational harm. The court could enforce its order through its contempt power (i.e., it could punish the custodian and/or child) or its power to modify custody (i.e., it could place the child with someone who would ensure public school attendance). In issuing any order to attend public schools, the court must weigh the custodian’s right to parent the child against the child’s best interest. The trend of contemporary jurisprudence shows that there is a finger on the scale in favor of the child’s best interest and well-being.9

**Relative Roles Of DPPs, CHFS, And Local Courts In Enforcing Compulsory Attendance For Home Schools**

Table 3.3 summarizes the legal authority and specific actions that can be taken by DPPs, CHFS, and local courts in enforcing compulsory attendance laws for home school students.
Table 3.3
Authority Of DPPs, CHFS, And Local Courts To Monitor Or Influence Home Schools

<table>
<thead>
<tr>
<th>Entity</th>
<th>Authorized Actions</th>
</tr>
</thead>
</table>
| Director of pupil personnel | • Monitor annual notification of home school enrollment  
• Request and review attendance and scholarship reports  
• Refer to cabinet, police, prosecuting attorneys, or courts if educational neglect is suspected |
| Cabinet for Health and Family Services; Department for Community Based Services | • Investigate claims of educational neglect in the interest of the child.  
• Develop case plan that requires the home school to either provide education or enroll the child in public school  
• If family does not meet conditions of case plan, refer to court |
| Courts | • Order a home school family to appear before a judge to determine whether a child is being neglected  
• Require a family to return to court with evidence of education  
• When it is found that a child is being neglected, the judge may issue court orders requiring the family to enroll the child in public school |

Effects Of Actions By DPPs, CHFS, Or Local Courts

No systematic data exist on the number of cases that have been adjudicated for educational neglect against Kentucky home schools or on the outcomes of those cases.

Figure 3.B reports DPPs’ views of the likelihood that actions taken by DPPs, DCBS, or courts will eventually effect a change in the education of a homeschooled student who may be receiving little or no instruction. Data are reported separately for concerns about home schools in which there are no apparent signs of abuse or neglect other than educational neglect and those in which other forms of abuse or neglect are suspected.

The data show that, regardless of whether other abuse or neglect is reported, estimated effects are highest for cases referred to county attorneys and lowest for actions taken by DPPs. DPPs’ estimates that actions are “very likely” to eventually effect a change are much higher when other abuse or neglect is suspected than when it is not. Less than one-third of DPPs reported that change in home schools would be “very likely” in home schools lacking other signs of abuse or neglect, even when a home school is referred to a county attorney. Estimated greatest effects were reported for cases referred to DCBS or a county attorney when other abuse or neglect is apparent. Even in these most extreme cases, however, less than two-thirds of DPPs reported that change would be “very likely.”
Figure 3.B

Likelihood Of Actions By DPPs, DCBS, Or Courts Effecting Change On Home Schools That Do Not Appear To Be Educating With Or Without Other Claims Of Neglect Or Abuse

Note: Percentages are calculated from DPPs who reported likeliness. Up to 10 percent of DPPs reported being unsure about scenarios described in the figure.
Source: OEA 2018 Homeschool Survey.

DPP Relationships With County Attorney And DCBS

Although DPPs ultimately identified a referral to the county attorney as most likely to effect a change in a home school that was not educating, 42 percent of DPPs reported that they rarely or never contact the county attorney and only 17 percent report that they often or almost always contact the county attorney. Only approximately one-third of DPPs (31 percent) reported that they often or always report concerns to DCBS.
During interviews, several DPPs reported that the close, collaborative relationships they have with CHFS or court workers facilitate action on home schools. Survey data indicate that in just over one-third of districts (35 percent) do DPPs often work closely with the cabinet. In almost half of districts (46 percent) DPPs work closely with the courts, and in just over one-third of districts (37 percent) the district, cabinet, and courts work closely with each other.
Appendix A

Reasons For Transferring To Home School

Figure A.1 shows the percentage of directors of pupil personnel (DPPs) who reported that they sometimes or often observe the identified reasons for transferring to home school.

**Figure A.1**
Frequency With Which DPPs Observe Particular Reasons Parents Transfer Students To Home School

- Concerns about suitability of public school for student’s disability
- Concerns about the effect of the school environment on student’s physical health
- Concerns about the quality of education
- Concerns about student’s physical safety
- Religious preferences
- Concerns about student’s emotional/mental health
- Desire to avoid negative peer relationships
- Family disagrees with a decision by school staff related to student (could include grades, student discipline)
- Family/child is facing negative consequences related to student’s truancy

Grade Placement And Credits

Students who transfer to public school from home school are not guaranteed to be placed in the grade that corresponds with their age or, if they are in high school, to receive credits toward high school graduation for instruction completed in home school.

Data from the OEA 2018 Homeschool Survey indicate that, at the elementary and middle school levels, most districts attempt to place students in the age-appropriate grade but also administer diagnostic tests to determine whether a child needs additional support to be successful in that grade. In some cases, based on diagnostic tests, homeschooled children entering public school may be placed in an earlier grade than is indicated by their age.

High School Graduation. 704 KAR 3:307 provides two methods by which local districts can award credits toward high school graduation for students transferring from nonaccredited schools. The student can pass an examination of similar nature or content to the course for which credit is desired, or the student can maintain a successful performance of C or above in a higher level class. OEA 2018 Homeschool Survey data indicate that districts use both methods but implement them differently. In some districts, credits toward high school graduation are awarded only for home school students with credits from an accredited online school; others accept credits from any online school. Some districts award credits toward graduation only for students who pass the final exam given in a particular class; others allow credits to be earned through credit recovery software. Some districts award credits for all classes that sequentially precede a class in which a homeschooled student is placed and able to earn a C or above.

---

*a The accredited online schools cited by DPPs were accredited not by the Kentucky Board of Education but by other accrediting agencies not recognized by the board.*
Appendix D

Reading And Math Achievement Of Students Who Transferred To Home School School Year 2017

Table D.1 shows 2017 reading and math Kentucky Performance Rating for Educational Progress (K-PREP) achievement data in grades 3 to 8 for students who transferred to home school in that year compared to the achievement of all other students. In reading, 37 percent of students who transferred to home school were proficient or distinguished compared to 57 percent of those who did not. In math, 23 percent of students who transferred to home school were proficient or distinguished, compared to 49 percent of those who did not. These data suggest that students who transfer to home school may be, on average, lower-performing than their peers who do not transfer. These data should, however, be interpreted with caution as they represent only about one-quarter of home school students who transferred in that year; the others transferred to home school before taking the assessment.

Table D.1
K-PREP Reading And Math Performance Designations, Grades 3 To 8, For Students Who Transfer To Home School And All Others School Year 2017

<td>23%</td>
<td>27%</td>
</tr>
<tr>
<td>Novice</td>
<td>20%</td>
<td>35%</td>
</tr>
</tbody>
</table>

Note: Data are available for only approximately one-fifth of the 2,412 students who transferred to home school in grades 3 to 8 in 2017 and are not necessarily representative of all students who transferred to home school. The table combines performance designations for all students in grades 3 to 8. Staff also analyzed achievement differences in each individual grade. Similar performance differences exist, though they vary slightly by grade. Percentages may not sum to 100 because of rounding.

Appendix E

Reading And Math Achievement Of Students
Who Transferred From Home School
School Year 2017

Table E.1 compares the 2017 reading and math performance of Kentucky public school students with that of students who transferred into public school from a Kentucky home school. Note that, because of the relatively small number of formerly homeschooled students for whom there are data in each grade, the table combines performance for all students in grades 3 to 8. Note also that the number of formerly homeschooled students included in the table represent a small fraction (less than 2 percent) of the total number of homeschooled students in those grades.

On average, the percentages of formerly homeschooled students who were proficient or distinguished was slightly lower than the number of all other students in reading (52 percent versus 55 percent) and substantially lower in math (35 percent versus 49 percent). Conversely, the percentage of formerly homeschooled students who were novice was slightly greater in reading (24 percent versus 21 percent) and much greater in math (29 percent versus 17 percent).

Overall, the table shows formerly homeschooled students performing fairly similarly to other students in reading. While suggesting that homeschooled students are more likely to fall behind their public school peers in math versus reading, the table does not raise concerns that homeschooled students across the board are falling far behind their peers in math.

Table E.1
Percentage Of Students By Reading And Math K-PREP Performance Designation,
Students Who Transfer From Home School And All Others
School Year 2017

Appendix H

Kentucky Statutes
Relevant To Duties Of Directors Of Pupil Personnel

KRS 159.130 Powers of directors of pupil personnel.

The director of pupil personnel and his assistants shall be vested with the powers of peace officers, provided, however, that they shall not have the authority to serve warrants. They may investigate in their district any case of nonattendance at school of any child of compulsory school age or suspected of being of that age. They may take such action in accordance with law as the superintendent directs. They may under the direction of the superintendent of schools and the board of education or the Kentucky Board of Education, institute proceedings against any person violating any provisions of the laws relating to compulsory attendance and the employment of children. They may enter all places where children are employed and do whatever is necessary to enforce the laws relating to compulsory attendance and employment of children of compulsory school age. No person shall refuse to permit or in any way interfere with the entrance therein of a director of pupil personnel or in any way interfere with any investigation therein.

Effective: July 15, 1996

KRS 159.140 Duties of director of pupil personnel or assistant.

(1) The director of pupil personnel, or an assistant appointed under KRS 159.080, shall:
   (a) Devote his or her entire time to the duties of the office except as provided in subsection (2) of this section;
   (b) Enforce the compulsory attendance and census laws in the attendance district he or she serves;
   (c) Acquaint the school with the home conditions of a habitual truant as described in KRS 159.150(3), and the home with the work and advantages of the school;
   (d) Ascertain the causes of irregular attendance and truancy, through documented contact with the custodian of the student, and seek the elimination of these causes;
   (e) Secure the enrollment in school of all students who should be enrolled and keep all enrolled students in reasonably regular attendance;
   (f) Attempt to visit the homes of students who are reported to be in need of books, clothing, or parental care;
   (g) Provide for the interviewing of students and the parents of those students who quit school to determine the reasons for the decision. The interviews shall be
conducted in a location that is nonthreatening for the students and parents and according to procedures and interview questions established by an administrative regulation promulgated by the Kentucky Board of Education. The questions shall be designed to provide data that can be used for local district and statewide research and decision-making. Data shall be reported annually to the local board of education and the Department of Education;

(h) Report to the superintendent of schools in the district in which the student resides the number and cost of books and school supplies needed by any student whose parent, guardian, or custodian does not have sufficient income to furnish the student with the necessary books and school supplies; and

(i) Keep the records and make the reports that are required by law, by regulation of the Kentucky Board of Education, and by the superintendent and board of education.

(2) A local school district superintendent may waive the requirement that a director of pupil personnel devote his or her entire time to his or her duties. The superintendent shall report the decision to the commissioner of education.

(3) In any action brought to enforce compulsory attendance laws, the director of pupil personnel or an assistant shall document the home conditions of the student and the intervention strategies attempted and may, after consultation with the court-designated worker, refer the case to the family accountability, intervention, and response team.

Effective: July 15, 2014
